## BRIEF METHODOLOGY

The CPI measures the average change over time in the prices of goods and services consumed by people for day-to-day living. The construction of the CPI combines economic theory, sampling, and other statistical techniques using data from other surveys to produce a weighted measure of average price changes in the Nigerian economy. The weighting occurs to capture the importance of the selected commodities in the entire index. The production of the CPI requires the skills of economists, statisticians, computer scientists, data collectors, and others.

Key in the construction of the price index is the selection of the market basket of goods and services. Every month, 10,534 informants spread across the country provide price data for the computation of the CPI. The market items currently comprise 740 goods and services regularly priced. The first stage in the calcuIation of the CPI is the collection of prices on each item ( 740 goods and services) from outlets in each sector (rural or urban) for each state. Prices are then averaged for each item per sector across the state. The next step is to use the average price to calculate the basic index for each commodity: The current year price of each commodity is compared with a base year's price to obtain a relative price.

Next, we use the Laspeyres formula to compute an aggregated index for each class (which has a multitude of commodities that have similar consumption purposes): Here the sum of the product of weights (obtained from the expenditure survey) and relative prices for each item is divided by the sum of the weight of the items in that class, and the result multiplied by 100 gives the required index number. This index number is still classified according to the urban and rural sectors for each of the 36 states and the FCT. This yields 85 classes then 48 groups which are then reclassified into 12 Divisions to derive:

1. The Country Composite Index
2. The Urban National Index
3. The Rural National Index
4. The Combined Urban and Rural State Composite Index

The survey methodology generates 3774 all-items indices for all states and the FCT.

This edition of the Statistical News contains the revised Consumer Price Index (CPI) based on Nigeria Living Standard Survey (NLSS) 2003/2004. The consumption expenditure data were re-valued to November 2009, which is the base period for the revised CPI.

The May 2003 and September 1985-based indices are being continued using factors derived from the new CPI. These indices will yield the same price change for any commodity group contained in all the series.
A new sub-index Imported Food Index- is available in the revised CPI.
Note: The urban and rural indices were weighted with the ratio of their populations to the national i.e., 0.455 and 0.545 respectively to compute the composite indices at the 12 Classification of Individual Consumption by Purpose (COICOP) functions and all-items levels. This may cause a variance between a recalculated all items index using the weights and the All-Items index published because the weights were computed only from the consumption expenditure survey result.

The following breakdown highlights a non-exhaustive list of the components of the current CPI:
FOOD AND
NON-ALCOHOLIC
BEVERAGES
Bread
and Cereals $\quad$ Meat

ALCOHOLIC BEVERAGES, TOBACCO AND KOLA

## CLOTHING AND FOOTWEAR

Repair and hire of Footwear

Clothing Materials, other articles of Clothing

Cleaning, Repair and Hire of Clothing

Motor cars

Passenger transport by air

COMMUNICATION

Telephone and telefax services

RECREATION AND CULTURE

Photographic development

Musical instrument

Games of chance

Audio-visual, photographic and information processing equipment

## EDUCATION

Books \& stationery

Accommodation services

Catering services

Insurance

Other services

## ALL ITEMS INDEX

CPI for July 2022 was 463.6 relative to 387.5 in July 2021. In July 2022, on a year -on- year basis, the headline inflation rate was 19.64\%. This was $2.27 \%$ points higher compared to the rate recorded in July 2021, which was (17.38 \%). This shows that the headline inflation rate increased in the month of July 2022 when compared to the same month in the previous year (i.e., July 2021). This means that in the month of July 2022 the general price level was $2.26 \%$ higher than in July 2021.

On a month-on-month basis, the Headline inflation rate in July 2022 was 1.817 \%, which was $0.001 \%$ higher than the rate recorded in June 2022 (1.816 \%).

The percentage change in the average CPI for the twelve months period ending July 2022 over the average of the CPI for the previous twelve months period was $16.75 \%$, showing a 0.46\% increase compared to 16.30\% recorded in July 2021.

The increases were recorded in all COICOP divisions that yielded the Headline index.
On a year-on-year basis, in the month of July 2022, the urban inflation rate was 20.09\%, this was $2.08 \%$ higher compared to $18.01 \%$ recorded in July 2021. On a month-on-month basis, the urban inflation rate was $1.82 \%$ in July 2022, this was a $0.0002 \%$ decline compared to June 2022 (1.82\%). The corresponding twelve-month average for the urban inflation rate was 17.29 \% in July 2022. This was 0.40\% higher compared to 16.89\% reported in July 2021.

The rural inflation rate in July 2022 was 19.22\% on a year-on-year basis; this was $2.47 \%$ higher compared to the $16.75 \%$ recorded in July 2021. On a month-on-month basis, the rural inflation rate in July 2022 was $1.811 \%$, up by $0.002 \%$ compared to June 2022 (1.809\%). The corresponding twelve-month average for the rural inflation rate in July 2022 was 16.25\%. This was 0.52\% higher compared to $15.73 \%$ recorded in July 2021.

## FOOD INDEX

The food inflation rate in July 2022 was 22.02 \% on a year-on-year basis; which was 0.99\% higher compared to the rate recorded in July 2021 (21.03\%). This rise in food inflation was caused by increases in prices of Bread and cereals, Food products n.e.c, Potatoes, yam and other tubers, meat, fish, oil, and fat.

On a month-on-month basis, the food inflation rate in July was $2.04 \%$, this was a $0.01 \%$ insignificant decline compared to the rate recorded in June 2022 (2.05\%). This decline is attributed to a reduction in the prices of some food items like Tubers, Maize, Garri, and Vegetables.

The average annual rate of food inflation for the twelve-month period ending July 2022 over the previous twelve-month average was $18.75 \%$, which was a $1.42 \%$ points decline from the average annual rate of change recorded in July 2021 (20.16\%).
5. Inflation -Rural All Items (\%)

## ALL ITEMS LESS FARM PRODUCE

The "All items less farm produce" or Core inflation, which excludes the prices of volatile agricultural produce stood at $16.26 \%$ in July 2022 on a year-on-year basis; up by $2.54 \%$ when compared to 13.72\% recorded in July 2021.

On a month-on-month basis, the core inflation rate was $1.75 \%$ in July 2022. This was up by $0.20 \%$ when compared to $1.56 \%$ recorded in June 2022.

The highest increases were recorded in prices of Gas, Liquid fuel, Solid fuel, Passenger transport by road, Passenger transport by Air, Garments, Cleaning, Repair and Hire of clothing.

The average 12-month annual inflation rate was $14.28 \%$ for the twelve-month period ending July 2022; this was 2.23\% points higher than the 12.05\% recorded in July 2021.

## STATE PROFILES

In analysing price movements under this section, it should be noted that CPI is weighted by consumption expenditure patterns that differ across states and locations. Accordingly, the weight assigned to a particular food or non-food item may differ from state to state making interstate comparisons of consumption basket inadvisable and potentially misleading.

## All Items Inflation

In July 2022, all items' inflation rate on a year-on-year basis was highest in Akwa Ibom (22.88\%), Ebonyi (22.51\%), Kogi (22.08\%), while Jigawa (16.62\%), Kaduna (17.04\%) and Borno (18.04\%) recorded the slowest rise in headline Year-on-Year inflation.

However, on a month-on-month basis, July 2022 recorded the highest increases in Adamawa (2.87\%), Abuja (2.84\%), Oyo (2.77\%), while Bauchi (0.82\%), Kano (0.83\%) and Niger (1.03\%) recorded the slowest rise on month-on-month inflation. .

## Food Inflation

In July 2022, food inflation on a year-on-year basis was highest in Kwara (29.28\%), Akwa Ibom (27.22\%), and Kogi (26.08\%), while Kaduna (17.16\%), Jigawa (17.46\%) and Anambra (19.25\%) recorded the slowest rise on year-on-year food inflation.

On a month-on-month basis, July 2022 food inflation was highest in Kwara (3.90\%), Delta (3.61\%), and Benue (2.94\%), while Taraba (0.14\%), Gombe (0.94\%), and Niger (1.13\%) recorded the slowest rise on month-on-month inflation.
