# Nigerian Gross Domestic Product Report 

## Quarter Three 2015

## Preface

This publication provides data on Quarterly Gross Domestic Product (GDP) estimates for the four quarters of 2014, the annual figure for 2014, and estimates for the first through third quarters of 2015.

Quarterly National Accounts (QNA) are integrated system of macroeconomic accounts designed to describe the entire system of production in a nation on a quarterly basis. They provide a picture of the current economic status of the economy that is more timely and frequent than that provided by Annual National Accounts (ANA). The key attribute of QNA is that they provide a reasonable level of detail of the economy that help government to assess, analyze, and monitor economic growth on a regular basis.

QNA adopts the same concepts, definitions and structure as ANA. In principle QNA covers the entire sequence of accounts and balance sheets as reflected in the 2008 System of National Accounts (2008 SNA).

Data for this analysis were obtained from the Quarterly Establishment Survey (QES) conducted by the National Bureau of Statistics (NBS). This series covers major aggregates of quarterly GDP by kind of economic activities at current and constant (2010) prices.

We are grateful to the various agencies and establishments that made their data available as input to the estimates.

## Introduction

The National Bureau of Statistics (NBS), has been conducting Establishment Surveys to provide data for the estimation of the Gross Domestic Product (GDP) for the country. In 2008, NBS started to improve the GDP series by conducting Quarterly Establishment Surveys (QES) for the four quarters of each year to complement the annual surveys which normally take place in the first and second quarters of the succeeding year.

In 2015, the National Bureau of Statistics (NBS) conducted the Quarterly Establishment Surveys for the first three quarters of 2015. These as well as previous surveys produced the data that was used for the compilation of the quarterly GDP for the four quarters of 2014 (Q1-Q4, 2014) and the first through third quarters of 2015.

In subsequent sections of this report, emphasis will be given to the composition of GDP in the Third quarter of 2015 and the corresponding quarter in 2014.

# Overview of GDP in Quarter Three 2015 

In the Third Quarter of 2015, the nation's Gross Domestic Product (GDP) grew by $2.84 \%$ (year-on-year) in real terms. This was higher by $0.49 \%$ points from growth recorded in the preceding quarter, yet lower by $3.38 \%$ points from growth recorded in the corresponding quarter of 2014. Quarter on quarter, real GDP increased by $9.19 \%$.

During the quarter, aggregate GDP stood at N24,313,636.94 million (in nominal terms) at basic prices. Nominal GDP growth was also higher relative to growth recorded in the Second Quarter of 2015 by $0.85 \%$ points. The Nigerian economy can be more clearly understood according to the oil and non-oil sector classifications:

## The Oil Sector

During the period under review, Preliminary data on Oil production reflects output at 2.17 million barrels per day (mbpd) up from production in the Second Quarter of 2015 by 0.17 mbpd . Oil production was also marginally higher to the corresponding quarter in 2014 by 0.02 mbpd when output was recorded at 2.15 mbpd . (Figure2)

Figure 2: Crude Oil Output (MBPD)* 09/15 output estimated

As a result, real growth of the oil sector increased by 1.06 (year-on-year) in Q3 of 2015 , higher by $4.65 \%$ points from the corresponding quarter of 2014, and higher from the Second Quarter when growth declined by $6.79 \%$. Quarter -on-Quarter, growth also increased by $14.35 \%$. As a share of the economy, the Oil sector represented $10.27 \%$ of total real GDP, down from the shares recorded in the corresponding period of 2014 by $0.18 \%$ points and up from the share in the Second Quarter of 2015 by $0.46 \%$ points.

The non-oil sector grew by $3.05 \%$ in real terms in the Third Quarter of 2015 . This was $4.45 \%$ points lower from the corresponding quarter in 2014 (Figure 3) and marginally lower from the Second Quarter of 2015. In real terms, the Non-Oil sector contributed $89.73 \%$ to the nation's GDP, marginally higher from shares recorded in the Third Quarter of 2014 ( $89.55 \%$ ), but lower from the Second Quarter of 2015 (90.20\%)

## Methodological notes

Quarterly National Accounts (QNA) are an integrated system of macroeconomic accounts designed to describe the entire system of production in a nation on a quarterly basis. They provide a picture of the current economic status of an economy on a more frequent basis than Annual National Accounts (ANA). In providing a reasonable level of detailed information of the economy, QNA allows the government to regularly assess, analyse and monitor economic developments.

In line with international standards outlined under the United Nations Statistics Division (UNSTATS), four major methodological pillars underpin GDP compilation in Nigeria:
The System of National Accounts (SNA 2008 version)
The internationally agreed standard of recommendations as to how to compile measures of economic activity.
The International Standard Industrial Classification (ISIC Revision 4.0):
This is the international reference for the classification of productive activities. Its main purpose is to provide a set of activity categories that can be used for the collection and reporting of statistics according to such activities.
The Central Product Classification (CPC version 2)
A classification based on the physical characteristics of goods or on the nature of services rendered. The CPC covers products that are output of economic activities.

Data for this analysis were obtained from the Quarterly Establishment Survey (QES) conducted by the National Bureau of Statistics (NBS), tax receipts from the Federal Inland Revenue Service, and other administrative sources such as the Nigerian National Petroleum Corporation. The series covers major aggregates of quarterly GDP under 46 activities at current and constant (2010) prices.

## Methodological notes Continued..

Using the above data and standards, GDP is computed as gross output minus intermediate consumption. Both gross output and intermediate consumption are detailed below for each activity:

## 1. AGRICULTURE

Under Section A, Division 01-03 of ISIC rev 4, Agriculture is divided into four main activities.

### 1.1 CROP PRODUCTION

Section A, Division 01 of ISIC Rev 4
Gross Output: Quantities produced multiplied by farm gate price, less losses (wastages).
Intermediate consumption: Seeds, fertilizer, pesticides, hire of farm implements and simple farm tools that are used up in one farming season.

### 1.2 LIVESTOCK PRODUCTION

Section A, Division 01 of ISIC Rev 4
Gross Output is calculated using the following Live animals and their produce + imports $=$ animals slaughtered and their produce- animals which died of natural causes +exports + change in animal stock.
Intermediate Consumption: Value of animal feeds as input in the production of livestock and livestock products (such as broiler starter concentrate, breeder concentrate, ground cake, guinea corn etc.)

### 1.3 FORESTRY

Section A, Division 02 of ISIC Rev 4
Gross Output: Value and quantity of timbers of various types (firewood, charcoal, uncultivated materials gathered). Other forest products obtained using expenditure approach. Sawn-logs, and other wood products categories are obtained using the production method, whereby, the quantity of logs produced is multiplied by the price per cubic of log.
Intermediate consumption: Expenditure on seeds and sapling, fuel oils, lubricants, feed, hand tools and spare parts, payments for contract work and other services.

### 1.4 FISHING

Section A, Division 03 of ISIC Rev 4
Gross Output: Measured by multiplying quantity in kilogram by the average price to obtain the value of production.
Intermediate consumption: Intermediate consumption here is captured according to expenditure on fingerlings, nets, feeds and other operating expenses.
2. MINING AND QUARRYING

Section B, Division 05-09 of ISIC Rev 4.0

### 2.1 CRUDE PETROLEUM AND NATURAL GAS

Section B, Division 06 of ISIC Rev 4
Gross Output: Quantity of crude petroleum produced (barrels) and Natural gas in million cubic feet (mcf) multiplied by the average price in domestic currency (equivalent of the price in dollar during the account period).
