## Manufacturing Data

The Manufacturing data used in this report was obtained from the National Bureau of Statistic s Survey of Esta blishments c onducted in 2013. It covers formal manufacturing establishments, which are defined as those which are registered and have audited accounts. The Survey data presented in this report cover all manufacturing subsectors apart from Oil Refining and Cement manufacture.

## Introduction

The Manufacturing sector report is structured as follows. Section one looks at the manufacturing sector in Nigeria at a macro level, briefly outlining its history and contribution to GDP today. Section two presents the formal manufacturing sector data, which is comprised of 11 of the 13 different economic activities covered in the manufacturing sector as classified in Nigeria's National accounts. The third and final sector looks at the composition of the formal manufacturing sector at the activity level. Findings can be summarized as follows:

- Sector Dominated by Food, Beverages and Tobacco
- The manufacture of Sugar and Bread products generate the greatest value of output
- Wages and Salary is the greatest form of employee compensation
- Generator fuel is the highest of all intermediate inputs in the manufacturing sector, and is steadily rising in all years of observations
- Taxes on Production are high and rising, whilst Subsidies on Production are falling in the period of review
- A greater portion of raw materials are sourced domestically, although the portion being imported is rising over the period
- Chemical and Pharmaceutical companies have the greatest value of raw materials in all years observed

The manufacturing sector has shown strong growth in recent years. Nonetheless, the sector faces ongoing challenges, including an inadequate electricity supply, poor infrastructure and plant maintenance, and heavy dependency on agricultural inputs, which themselves are vulnerable to shocks. Its strengths are nonetheless abundant; semi-skilled yet low paid workforce, the availability of domestically sourced inputs and most importantly, a huge domestic demand for consumer products. It therefore displays great potential for future expansion.

## SECTION ONE: Manufacturing in Nigeria

## History of the Nigerian Manufacturing Sector

Since a peak of $7.83 \%$ in 1982 , the contribution of manufacturing as a share of total economic output in Nigeria generally declined. Many factors have contributed to the variation in sector share through time, many of which show both the vulnerability of manufacturing to global economic pressures, as well as the impacts that policy changes can have in reshaping the sector.

Prior to the oil boom of the 1970's, manufacturing contributed approximately $10 \%$ to Nigeria's economic output. Thereafter, increased revenues from oil caused the sector's relative Gross Domestic Product (GDP) share to decline; growth persisted albeit at a slower rate. The recession caused by the fall in oil prices in the early 1980's triggered policy attention to turn back to the manufacturing sector, with steel production gaining prime focus. Prior to this, the Nigerian Enterprises Promotion Decrees of 1972 and 1977 had switched the majority firm ownership from foreign to Nigerian, restricting foreign capital inflows. The lack of affordability of imported goods, combined with the absence of foreign capital and technology, encouraged domestic production of basic commodities such as soap and salt.

Alongside, price manipulation through export and import subsidies encouraged the importation of intermediary inputs and thus the expansion of assembly based industry. A brief spike in manufacturing output was observed in the early 1980's (See Fig 1) so that it contributed to $7.83 \%$ of total economic output. However, the price manipulation discouraged domestic manufacture of inputs, as well as the investment in the infrastructure and human capital required to do so in the future and this share soon began to decline.

In 1987 import bans on raw materials were imposed under the World Bank Structural Adjustment Programmes (SAPs), encouraging import substitution. Intermediary input manufacturers were able to produce competitively again, and there were fewer plant closures. This, combined with the Privatisation and Commercialisation Act of 1988, encouraged a higher degree of efficiency to be achieved in manufacturing. A slight increase in the share of manufacturing in economic output of $0.62 \%$ points was observed from 1986-1988, shown in Figure 1.

Throughout the 1990s and 2000's, Nigeria continued to rely heavily on the export of oil, allowing manufacture to remain in decline. Firms were not export orientated, and lacked efficiency, causing competitive companies to relocate factories abroad. A few key industries, such as beverages, textiles, cement and tobacco kept the sector afloat, but even these operated at under half of their capacity. To this day, production is mainly located in Lagos and its periphery, and to a lesser extent some other commercial towns such as Kano or Kaduna.

## Manufacturing Sector Contribution to GDP Over Time (Old Series)

Figure 1: Manufacturing Sector Contribution to Real GDP Over Time

## Manufacturing in the Nigerian Economy Today

Post rebasing ${ }^{1}$, the manufacturing sector shows a more optimistic picture, as more modern manufacturing activities have been captured, and prices correctly deflated so that they are representative of the price structure in the economy at that time, taking account of inflation.

## Manufac turing Sector Contribution to GDP after Rebasing

Figure 2: Manufacturing Sector Contribution to GDP Post-Rebasing

Standing at a 2010 value of $\mathrm{N} 3,578,641.72$ million, the Manufacturing sector represented $6.55 \%$ of total real GDP in that year. It grew by N948,803.34 million or $26.51 \%$ in 2011 to reach N4,527,445.06 million or $7.79 \%$ of real GDP in that year and by $\mathrm{N} 1,061,376.64$ million or $23.44 \%$ in 2012 to reach a value of N5,588,821.69 million or $7.79 \%$ of real GDP that year. However, growth was highest in 2013, at $\mathrm{N} 1,644,500.79$ million or $29.42 \%$, so that the contribution of the Manufacturing sector reached N7,233,322.48 million or $9.03 \%$ of real GDP, a value that had not been recorded in decades.

[^0]Part of the reason for the increase in the contribution of the manufacturing sector to GDP is the better capturing of output. Prior to rebasing manufacturing included just three activities - Oil Refining, Cement and Other Manufacturing. Now, the Other Manufacturing Activity has been broken down into 11 different activities, bringing the total for the manufacturing sector to 13 . Figure 3 shows how total manufacturing output is divided among these activities. Food Beverages and Tobacco is by far the greatest contributor at $\mathrm{N} 3,814.50$ billion or $52.74 \%$ of the total, followed by Textiles Apparel and Footwear at $\mathrm{N} 1,303.68$ billion or $18.02 \%$ of the manufacturing sector total. The activities from the old classification of Cement and Oil refining follow, at N450.75 billion or $6.23 \%$ and N 412.30 billion or $5.70 \%$ of the manufacturing sector total in 2013 respectively.

The Composition of the Nigeiran Manufacturing Sectior in 2013

- Oil Refining
- Cement
- Food, Beverage and Tobacco
-Textile, Apparel and Footwear
- Wood and Wood Products
- Pulp, Paper and Paper Products
- Chemicaland Phamaceutical Products
- Non-Metallic Products

Figure 3: Composition of Manufacturing Sector in 2013

## SECTION TWO: The Formal Manufacturing Sector Post Rebasing

## Total Formal Sector Output

Total manufacturing output in the formal sector in Nigeria was N6,845,678.59 million in 2010. It increased over the following two years, by N1,326,277.80 million or $19.37 \%$ in 2011 to reach $\mathrm{N} 8,171,906.39$ million and by $\mathrm{N} 1,652,610.80$ million or $20.22 \%$ in 2012 to reach a total of N9,824,517.19 million.

In all three years, the formal manufacturing sector was dominated by output from the Food Beverages and Tobacco Activity, with N4,930,494.55 million or $72.02 \%$ of output contributed in 2010. Despite the activity's growth of N488,855.06 million or $9.91 \%$ in 2011 and $\mathrm{N} 712,759.35$ million or $13.15 \%$ in 2012, this total output share declined to $66.32 \%$ and $62.42 \%$ in 2011 and 2012 respectively.

The second largest contributor to manufacturing output was the Textile, Apparel and Footwear Activity, which at N792,693.12 million in 2010, represented $11.58 \%$ of total output. With growth of N398,019.65 million or $50.21 \%$ in 2011, the total output of $\mathrm{N} 1,190,712.77$ million represented $14.57 \%$ of total output. This share increased further in 2012, with output of $\mathrm{N} 1,652,840.71$ million representing $16.82 \%$ of the total, due to output growth of N462,127.94 million or $38.81 \%$.

Other Manufacturing and Non-Metallic Products were the third an fourth greatest contributors to manufacturing output, representing N392,317.00 million or $11.58 \%$ of the total and $\mathrm{N} 187,709.52$ million or $5.73 \%$ of the total in 2010 . However, whilst non-metallic products' share remained relatively constant over the period, that held by Other Manufacturing increased. The year 2011 saw a rise of N183,354.36 million or $46.74 \%$, increasing its share to $7.04 \%$ of the total for the sector. From this total value of N575,671.36 million, it increased by a further N210,716.46 million or $36.60 \%$, reaching N786,387.82 million or $8.00 \%$ of the total.

Basic Metals, Iron and Steel exhibited the fastest rate of growth over the period, increasing by N77,227.64 million or $77.03 \%$ in 2011, from the N100,262.47 million recorded in 2010 to $\mathrm{N} 177,490.11$ million in 2011.

No activities recorded negative output growth between 2010 and 2012. Although the lowest growth rate of $9.91 \%$ was recorded for the Food, Beverages and Tobacco Activity in 2011, absolute output still increased by an impressive $\mathrm{N} 488,855.06$ million.

## Dominant Manufacturing Activities

## Food, Beverages and Tobacco

The Food, Beverages and Tobacco Activity had the largest output of all those in the Manufacturing Sector, with the greatest number of classes of goods captured. Of those product classes, the greatest contributor in all three years of review is Sugar, which had an output of $\mathrm{N} 1,940,413.34$ million, N2,438,316.12 million and N2,710,304.15 million in years 2010, 2011 and 2012 respectively, constituting $39.36 \%, 44.99 \%$ and $44.20 \%$ of the Food, Beverages and Tobacco total in each year. To put this in perspective, the product alone contributed $28.35 \%, 29.84 \%$ and $27.59 \%$ to the total output for the manufacturing sector as a whole in the respective years of 2010, 2011 and 2012. Growth of sugar output was higher than the sector average in 2011, increasing by N497,902.73 million or $25.66 \%$, driving the majority of growth in the sector in that year. With growth of $\mathrm{N} 271,968.03$ million or $11.15 \%$, the sheer size of sugar output meant that it largely contributed to the growth seen the following year also.

# Output by Product Food, Beverages and Tobacco Activtiy 

Figure 4: Manufacturing Data by Products

The product with the second greatest output is Bread, which produced a value of $\mathrm{N} 1,398,459.12$ million in 2010 , N1,099,934.59 million in 2011 and N1,319,418.19 million in 2012 and contributed $28.36 \%$, $20.30 \%$ and $21.52 \%$ to the total activity output in each year respectively. Again, this is a significant contributor to the Manufacturing sector as a whole, at $20.43 \%, 13.46 \%$ and $13.43 \%$ of the Manufacturing total output in 2010, 2011 and 2012 respectively. Although interestingly, Bread was one of only two products to decline in output over the period; in 2011, output declined by N298,524.52 million or $21.35 \%$, bouncing back by a lesser $\mathrm{N} 219,483.60$ million or $19.95 \%$ the following year. The other product to exhibit a decline in output was Juice, which declined by N182,858.28 million or $60.35 \%$ from N303,015.41 million to N120, 157.13 million in 2011. Similarly, it managed growth the following year, of N38,054.96 million or $31.67 \%$ to reach N158,212.09 million.

The third most significant contributor was Rice, followed by Biscuits. Rice output stood at 2,211,827 Kg in 2010 valued at N508,720.13 million, increasing to $2,839,845 \mathrm{Kg}$ valued at $\mathrm{N} 681,562.84$ million in 2011 and to $3,130,535 \mathrm{Kg}$ valued at $\mathrm{N} 760,719.92$ million in 2012 . This represented $10.32 \%, 12.58 \%$ and $12.41 \%$ of total output value in 2010, 2011 and 2012 and increases of N172,842.71 million or $33.98 \%$ in 2011 and N79,157.08 million or $11.61 \%$ in 2012. Biscuits represented N353,836.08 million or $7.18 \%$ of output in 2010 , N453,807.45 million or $8.37 \%$ in 2011 and $\mathrm{N} 503,679.49$ million or $8.21 \%$ in 2012.

## Output by Product Food, Beverages and <br> Tobacco

Figure 5: Output by Product: Food Beverages and Tobacco

## Textiles, Apparel and Footwear

As the activity with the second largest output, Textiles Apparel and Footwear contributed an increasing share of $11.58 \%, 14.57 \%$ and $16.82 \%$ of total manufacturing output in 2010,2011 and 2012 respectively. The key driver of this growth was the product of Other Woven fabric, which dominates the activity. With output valued at N682,446.65 million or $86.09 \%$ of the activity total in 2010 , output value increased by N282,912.08 million or $41.46 \%$ in 2011 , to reach $\mathrm{N} 965,358.73$ million, which was $11.81 \%$ of the manufacturing total. In 2012, Other Woven fabric production increased further, this time by N403,308.95 million or $41.78 \%$, reaching $1,368,667.68$ million or $13.93 \%$ of the total output of the manufacturing sector in that year.

The second greatest contributor after this was Leather Shoes, which had a more mixed growth story. Contributing N36,845.81 million or $4.65 \%$ of the activity total in 2010, it grew by an impressive N44,391.23 million or $120.48 \%$ in 2011, with the value of N81,237.04 million expanding its share of the activity total to $6.82 \%$. However, in 2012 output declined by N7,189.70 million or $8.85 \%$ to $\mathrm{N} 74,047.34$ million or $4.48 \%$ of the activity total.

## Other Manufacturing

Other Manufacturing includes activities that have not elsewhere been classified in the Manufacturing Sector. Examples of products that are captured here are Office Furniture, Cupboard/wardrobes, Furniture/Doors/Windows, Mattresses and Brio/Pens.

At a value of N392,317.00 million in 2010, N575,671.36 million in 2011 and N786,387.82 in 2012, Other Manufacturing was the third largest of all activities in the manufacturing sector in all years of review, contributing an increasing share of $5.73 \%, 7.04 \%$ and $8.00 \%$ to the total respectively. The fastest growing, and one of the main contributors to growth, is the manufacture of Mattresses, which from the $\mathrm{N} 196,158.50$ million or $22.80 \%$ of the total recorded in 2010 , grew by $\mathrm{N} 71,836.94$ million or $80.32 \%$. The following year, it grew by a further N54,009.24 million or $33.49 \%$, reaching $\mathrm{N} 215,287.80$ million or $27.38 \%$ of the total. This was not the only class of products that experienced high growth over the period; in 2012 all products grew at a rate of over $30 \%$. The lowest was even Mattresses at $33.49 \%$, whilst the highest growth was recorded for Cupboard/Wardrobe manufacture, which increased by 42.75\% or N179,98 million from N421.04 million in 2011 to N601.02 million in 2012.

## Output by Product Other Manufacturing

 Activity

Figure 6: Output by Product: Other Manufacturing Activity

## Employment

The number of those engaged in employment in the Manufacturing Sector in 2010 totaled 2,880,973, increasing by 148,912 persons or $5.17 \%$ to $3,029,884$ in 2011. In 2012 however, there was a marginal decline in employment in the manufacturing sector, by 48,803 persons or $1.61 \%$. to reach a total of $2,368,514$ employed in that year.

In $2010,82.23 \%$ or $2,368,970$ of those engaged in the manufacturing sector were paid employees. This portion increased in the following year, by $7.86 \%$ or 186,214 employees, meaning that all of the increase in engagement in the sector in 2011 was from new paid employees. From the 2,555,184 paid employees recorded in the manufacturing sector in 2011 , there was a decrease of $7.31 \%$ or 186,870 employees to 2,368,514.

Employment in the Manufacturing Sector

Figure 7: Employment in the Manufacturing

The majority of those employed in the manufacturing sector are Nigerian males, making up $78.62 \%$ (2,264,916 employees) of those engaged and a slightly larger portion of $81.14 \%$ ( $1,922,223$ employees) of those paid in 2010. Nigerian females make up 546,805 or $18.98 \%$ of those engaged, yet 391,362 or $16.52 \%$ of those employed in the same year. The remaining $2.41 \%$ is dominated by non-Nigerian males, which make up 57,570 or $2.00 \%$ of those employed in 2010, whilst non-Nigerian females take the remaining, 11,681 or $0.41 \%$ of those engaged. For non-Nigerian males, the same portion of $2.00 \%$ are paid employees, making up 47,342 employees, whilst non-Nigerian females have a lower portion paid, at 8,043 or $0.34 \%$ of the total in 2010 .

In 2011, there were increases in both engaged and employed persons in the manufacturing sector across all genders and nationalities. In absolute terms, the largest was for Nigerian males, which increased by $4.98 \%$ or 112,785 persons engaged and $9.01 \%$ or 172,097 persons employed to reach $2,377,701$ and 2,095,320 employees respectively. Non-Nigerians had the greatest percentage increases, with females engaged increasing by $9.75 \%$ or 1,139 persons, to reach 12,820 in total in 2011. Non-Nigerian paid employment had the greatest increase of the paid employees, with $11.04 \%$ or 5,227 employees in 2011, reaching 52,568 employed.

For Nigerian males, the increase in engagement in employment in the manufacturing sector continued to increase in 2012, albeit by a marginal $0.16 \%$ or 3,733 persons, reaching 2,381,435 engaged. However, the number paid for their employment did not manage to maintain positive growth; it declined by $6.56 \%$ or 137,455 employees in 2012. Negative growth was even greater for Nigerian females. For those engaged in the manufacturing sector there was a 62,217 person or $10.79 \%$ decline fro 576,868 to 512,642 persons. For those paid, the decline was by $14.59 \%$ or 58,123 employees from 398,458 in 2011 to 340 , 335 in 2012. For those in paid manufacturing employment, the only increase in employment was for non-Nigerian males, which increased by 9,197 employees or $17.49 \%$ in 2012 , to reach 61,765 paid employees.

## Employee Compensation

Total employee compensation, in the form of wages and salary, Other benefits, Social security contributions and Directors' fees/allowances, summed to N1,198,253.65 million in 2010. By 2011, it had increased by $\mathrm{N} 298,378.68$ million or $24.90 \%$ to $\mathrm{N} 1,496,632.33$ million. The increase was even greater in 2012, with a further $25.55 \%$ rise, of $\mathrm{N} 380,721.91$ million to $\mathrm{N} 1,877,354.24$ million.

Employee compensation in 2010 was mostly made up of Wages and Salary, which constituted N646,189.77 million or $53.93 \%$ of the total paid to employees. This was followed by Other benefits, which constituted N485,225.07 million or $40.49 \%$ of total employee compensation. The remainder is made up of social security contributions, which contributes N22,270.69 million or $1.86 \%$ and Directors' fees/allowances, of $\mathrm{N} 44,496.73$ million or $3.71 \%$.

Over the following two year period, there is a steady increase in the portion of compensation paid directly as Wages and Salary and a steady decline in the portion paid as Other benefits.

In 2011 Wages and salary increased by $33.23 \%$ or $\mathrm{N} 215,293.15$ million to $\mathrm{N} 861,482.92$ million to make up $57.56 \%$ of the total, whilst Other benefits, which may include a company car, mobile phone or even

## Employee Compensation

bonuses, increased by a lesser N44,249.72 or $9.12 \%$ to N529,474.79, causing a decline of in its share of the total by $5.12 \%$ points to $35.38 \%$. Wages and Salary continued to increase in 2012, by N239, 357.94 million or $27.78 \%$ to $\mathrm{N} 1,100,840.86$ million, or a $58.64 \%$ share of the total. Other benefits also increased substantially, by N85,430.45 million or $16.13 \%$ to N614, 905.24 million, although its share of the total still declined to $32.75 \%$.

Both social security contributions and Directors' fees and allowances increased substantially over the period. Most notable was the Directors' fees and allowances, increasing from the N44,496.73 million in 2010, by $73.97 \%$ or N32,914.34 million to $77,411.12$ million in 2011 and a further $51.76 \%$ or N40,064.38 million to 117.475 .50 million in 2012. Over the period its share of the total therefore increased by $2.54 \%$ points, from $3.71 \%$ in 2010 to $6.26 \%$ in 2012.

## Inventory and Depreciation

In 2010, the opening stock of raw materials in the manufacturing sector was valued at $\mathrm{N} 2,349,374.68$ million. It increased by $\mathrm{N} 434,896.34$ million or $18.51 \%$, opening at $\mathrm{N} 2,784,271.02$ million in 2011, yet

Raw Materials by Source

declined by a similar N492,291.15 million or $17.68 \%$ in 2012, opening at $\mathrm{N} 2,291,979.86$ million.

Raw materials that were locally sourced were greater than those imported in all three years, although this portion declined over the period. In 2010 locally imported raw materials were valued at N7,304,864.27
million, that is $71.70 \%$ of the total. Their value declined by $\mathrm{N} 1,261,182.74$ million or $17.26 \%$ in 2011 , whilst the value of imported raw materials increased by $\mathrm{N} 1,476,946.94$ million or $51.22 \%$ from $\mathrm{N} 2,883,805.34$ million to $\mathrm{N} 4,360,752.28$ million. The share of domestically sourced raw materials subsequently declined to $58.09 \%$. In 2012 both domestic and locally sourced raw materials used declined, by $\mathrm{N} 422,813.79$ or $7.00 \%$ and $\mathrm{N} 333,410.69$ million or $7.65 \%$ respectively.

For opening stocks of finished goods, there was a steadier decline. Valued at $\mathrm{N} 2,333,732.34$ million in 2010 , it declined by N488,327.64 million or $20.92 \%$ in 2011 and by $\mathrm{N} 123,147.95$ million or $6.67 \%$ in 2012, reaching a value of $\mathrm{N} 2,291,979.86$ million.

Depreciation increased steadily over the period. From the N699,135.17 million recorded in 2010, it increased by N192,595.28 million or $27.55 \%$ in 2011 to $\mathrm{N} 891,730.45$ million and then by a further N22,583.20 million or $2.53 \%$ to $\mathrm{N} 914,313.65$ million in 2012.

## Intermediate Inputs

Intermediate inputs are the goods and services that are consumed or used up in the manufacturing process, examples of which are outlined in Figure 10. The total amount spent on intermediate inputs in

## Composition of Intermediate Inputs

the manufacturing sector totaled N4,043,539.22 million in 2010 . This increased by N376,940.34 million $9.32 \%$ to N4,420,479.56 million in 2011 and by an even greater N780,765.14 million or $17.66 \%$ in 2012 to reach $\mathrm{N} 5,201,244.69$ spent on intermediate inputs.

Figure 10: Composition of Intermediate Inputs

In all three years, the amount spent on generator fuel was the greatest of all intermediate inputs in the Manufacturing sector. It stood at N886,255.56 million in $2010,21.92 \%$ of all input costs that year. It then rose by $\mathrm{N} 161,265.99$ million or $18.20 \%$ in 2011 to reach $\mathrm{N} 1,047,521.56$ million or $23.70 \%$ of all intermediate input costs. By 2012 it had risen again, this time by N171,057.89 million or $16.33 \%$ to $\mathrm{N} 1,218,579.44$ million, albeit a $0.27 \%$ point smaller share of intermediate inputs than in 2012 , at $23.43 \%$.

In 2010, the second greatest cost was for the replacement of minor regular repairs and maintenance, at N809,332.65 million or $20.02 \%$ of the total. However, this cost declined the following year, by $\mathrm{N} 46,092.89$ million or $5.70 \%$ to $\mathrm{N} 763,239.76$ million or $17.27 \%$ of the total. By 2012, it had grown again, by N156,374.54 million or $20.49 \%$ to N919, 614.30 million or $17.68 \%$ of the total.

The third greatest intermediate input cost was for PHCN bills, which grew steadily over the period. Starting from N743,325.43 million, it rose by N66,377.96 million or $8.93 \%$ in 2011 and by N76,299.04 million or $9.42 \%$ in 2012 to reach a value of $\mathrm{N} 886,002.43$ million in that year.

The greatest percentage increase in intermediate costs was for Water bills, which rose by N16,242.56 million or $75.85 \%$ from $\mathrm{N} 21,414.85$ million in 2010 to $\mathrm{N} 37,657.12$ million in 2011. There were no declines in the amount spent on intermediate inputs in any subcategories in 2012. However, in 2011 there were declines in Waste disposal bills, Minor regular repairs and maintenance and rents on machinery and buildings (office accommodation). The greatest of these declines was for the waste disposal bills, which went from N312,253.04 million to N284,059.59 million, a decline of $\mathrm{N} 28,193.45$ million or $9.03 \%$.

## Taxes and Subsidies

Taxes and subsidies are divided into Taxes on Production, Other Taxes on Production and Subsidies. Taxes on production are fees levied by the government on the production, sales and importing of goods and services, increasing the cost of production to beyond that which would be determined by the market. They exclude taxes on profit or other incomes. Other taxes on production are any other costs to the producing establishment, often pertaining to the use of factors of production; for example land, fixed assets and labour. Taxes are often introduced by government as a way of generating revenue or controlling levels of production. Subsidies, on the other hand can be defined as an unrequited payment from a government to an establishment in connection with the production, sales and imports of goods and services, that will make the cost of that good or service artificially lower than would be determined
by the market. The converse to taxation, subsidization is introduced to encourage production of a good or service, for intended economic or social benefit.

The largest of the three in all years is the Taxes on production category, which stood at N59,027.41 million in 2010, increasing by $\mathrm{N} 7,850.50$ million or $13.30 \%$ in 2011 and $\mathrm{N} 17,099.10$ million or $25.57 \%$ in 2012 to total N83,977.01 million that year. This was followed by Other Taxes on Production, which totaled N49,918.16 million in 2010, increasing by N15,799.30 million or $32.30 \%$ and $\mathrm{N} 16,082.26$ million or $24.85 \%$ in 2011 and 2012 respectively.

# Taxes and Subsidies in the Manufacturing Sector 

Figure 11: Taxes and Subsidies in the Manufacturing Sector

Subsidies made up a far smaller amount than taxes, being approximately $9 \%$ of the amount paid in production taxes in 2010, and about $1 \%$ in 2011 and 2012. It also showed the only decline in value of all taxes and subsidies over the period of review, falling by N4,653.03 million or $89.86 \%$ from N5,178.18 million in 2010 to N525.15 million in 2011. It recovered slightly in 2012, increasing by N345.79 million or $65.85 \%$ to reach N 879.94 million in this year.

## SECTION THREE: Manufacturing Sub-Sectors

## Employment

In all three years of review the Chemical and Pharmaceutical Manufacturing Activity had both the highest levels of employee Engagement and Paid Employment. In 2010 it engaged 1,153,756 workers or $40.05 \%$ of the total number of workers engaged, with 975,116 or $84.52 \%$ of these being paid, which in turn constituted $41.16 \%$ of the paid workforce.

The second greatest employer in 2010 was the activity of Food Beverages and Tobacco, engaging 511,150 people or $10.46 \%$ of the total, with 401,668 paid employees or $17.74 \%$ of the total. This was followed by Motor vehicles and assembly, with 314,152 or $10.90 \%$ of workers engaged in employment and 306,991 or $97.72 \%$ of those engaged being paid for this, which is the highest of all activities. The smallest employer in 2010 was the Electrical and Electronics activity, which employed 12,328 persons or

## Employees Engaged in Manufacturing by Activity

$0.43 \%$ of the total; paid employees were also the smallest with 12,039 persons or $0.49 \%$ of the total.

Figure 12: Employees Engaged in Manufacturing by Activity

Chemical and Pharmaceutical Manufacturing continued to dominate in 2011 and 2012, with the total engaged growing by 91,583 employees or $7.94 \%$ in 2011 to reach $1,245,339$ workers and by a further 151,824 employees or $12.19 \%$ in 2012, reaching 1,397,163 workers engaged. The number being paid for this employment however did not follow this pattern; in 2011 there was growth of 127,353 paid
employees or $13.06 \%$ and in 2012, there was a much slower growth in paid employees of 35,260 or $3.20 \%$, showing that there was an increase in unpaid employment.

The other dominant sector of Food, Beverages and Tobacco showed a mixed employment growth story over the period. The total engaged increased by 38,117 employees or $7.46 \%$ in 2011 , raising its portion of the total engaged to $18.13 \%$. Yet, it decreased by 237,375 employees or $43.22 \%$ the following year so that its share of the total declined starkly, to $10.46 \%$, moving it to the joint second greatest contributor to worker engagement alongside Other Manufacturing. Similarly, workers being paid increased by 54,838 employees or $13.65 \%$ in 2011 and decreased by 251,382 employees or $55.07 \%$ in 2012. This had a marked effect on the portion of the total paid, which dropped $19.96 \%$ of the total in 2010 , to $17.87 \%$ in 2011, to just $8.66 \%$ in 2012.

## Paid Employees in the Manufacturing Sector by Activity

Figure 13: Paid Employees in the Manufacturing Sector by Activity

Motor Vehicles and Assembly did not maintain its share as the third largest in terms of worker engagement, yet it did so in terms of workers paid. In fact, it is the only activity within the top three to have a larger portion of paid workers than engaged. In 2011, workers engaged in the activity decreased by 33,243 employees or $10.58 \%$, so that the sector then contributed $9.27 \%$ of the 2011 total, increasing by 8,932 employees or $3.54 \%$ in 2012 , to total 290,849 workers or $9.76 \%$ of the total, pushing it to the
fourth largest employer. For those paid there was a similar decline in paid employment by 33,310 workers or $10.85 \%$ in 2011 and increasing by 8,932 employees or $3.26 \%$ in 2012. Totaling 282,614 paid employees it was the second largest employer of paid workers in 2012, contributing $11.93 \%$ of the total. In turn, Motor Vehicles and Assembly had the highest portion of engaged employees being paid in all three years, peaking at $97.72 \%$ in 2010.

## Employee Compensation

Interestingly, despite being the largest employer, the Chemical and Pharmaceutical Manufacturing Sector contributed one of the lowest figures in terms of employee compensation, at just $\mathrm{N} 8,110.00$ million in 2010 , making up $0.68 \%$ of all employee compensation that year. Although it did show great increases in this amount in 2011 and 2012, by N8,518.55 million or $105.04 \%$ and $\mathrm{N} 8,484.01$ or $51.02 \%$ respectively,

## Employee Compensation by Manufacturing Activity in 2010

- Food, Beverage and Tobacco
- Textile, Apparel and Footwear
- Wood and Wood Products
- Pulp, Paper and Paper Products
- Chemical and Phamaceutical Products
- Non-Metallic Products
- Plastic and Rubberproducts
- Electric al and Electronics
- Basic metal, Iron and Steel
- Motor Vehic les \& Assembly
- Other Manufacturing
it still only constituted $\mathrm{N} 16,628.52$ million or $1.11 \%$ of the total in 2011 and $\mathrm{N} 25,112.53$ million or $1.34 \%$ in 2012.

Figure 14: Employee Compensation by Manufacturing Activity in 2010

Food Beverages and Tobacco, however, as the second largest employer, had by far the largest amounts of employee compensation, with $\mathrm{N} 922,030.78$ million or $76.95 \%$ of the total in 2010 . This increased by $\mathrm{N} 122,661.62$ or $13.30 \%$ in 2011, to reach $\mathrm{N} 1,044,692.40$ million, despite declining to $69.80 \%$ of the total compensated to employees in the manufacturing sector that year. A similar story is told in 2012, with another N201,203.35 million or $19.26 \%$ increase in compensation, yet a decline in share to $66.36 \%$, with a total of $\mathrm{N} 1,245,895.75$ million.

Textile, Apparel and Footwear had the second greatest figure for employee compensation, with N155,632.70 million in 2010, or $12.99 \%$ of the total. This is interesting, as it employed just $1.55 \%$ of the paid workforce in that year. The figure even increased greatly in 2011 and 2012, by N102,676.82 million or $65.97 \%$ in 2011 and N142,144.12 million or $55.03 \%$ in 2012, so that it totaled N400,453.70 million in $2012,21.33 \%$ of the total. The third greatest contributor to employee compensation was Other Manufacturing, which constituted a much lesser N35,369.07 million or $2.95 \%$ to the total in 2010. This increased greatly the following year, by $\mathrm{N} 26,917.89$ million or $76.11 \%$, increasing its share of the total to $4.16 \%$. However, in 2010 employee compensation in the Other Manufacturing sector declined by $\mathrm{N} 9,971.83$ million or $16.01 \%$ to $\mathrm{N} 52,315.14$ million or $2.79 \%$ of the total; the third largest contributor to employee compensation that year became Non-metallic products at N53,434.15 million or $2.85 \%$ of the total.

## Inventory

## Raw Materials

The activity with the greatest portion of locally sourced raw materials in 2010 was Basic Metals, Iron and Steel, constituting N2,559.74 million $95.78 \%$ of the total. This was followed by Chemical and Pharmaceutical, for which locally sourced raw materials constituted $\mathrm{N} 4,989,033.56$ million or $79.61 \%$ of the total. For imported raw materials, Food, Beverages and Tobacco had the largest share, with N677,711.78 million or $72.29 \%$ of raw materials used that year. This was by far the highest, with other activities not importing up to half of their raw materials; plastic and rubber products imported $\mathrm{N} 25,734.03$ million or $46.89 \%$ of their raw materials.

Over the period, the portion of locally sourced raw materials generally declines, except in the case of Basic Metals, Iron and Steel, in which it continued to constitute over $95 \%$ of the total. For Chemical and Pharmaceutical activities, the portion declined to $66.83 \%$ in 2011 and $56.49 \%$ in 2012. On the imports side, the portion of raw materials imported in the Food, Beverages and Tobacco activity declined, to
$68.94 \%$ in 2011 and $60.35 \%$ in 2012. Plastic and Rubber Products however, showed a marginal decline in the portion of imported goods to $46.24 \%$ in 2011 and an increase in 2012 to $55.67 \%$, so that it became an industry relying more on imported goods than local.

## Raw Materials Imported

Of the $\mathrm{N} 2,883,805.34$ million worth of Raw materials that were imported for use in the Manufacturing sector in 2010, N1,277,705.90 million or $44.31 \%$ were for the Chemical and Pharmaceutical Activity. The second greatest user of imported raw materials in 2010 was Food, Beverages and Tobacco, with N677,711.78 million or $23.50 \%$ of the total, followed by Textile, Apparel and Footwear with N465,167.57 million or $16.13 \%$ and Motor Vehicles and Assembly with N147,583.44 million or 5.12\% of the total.

Motor Vehicles and Assembly was also the Activity with the greatest absolute increase in importation of raw materials in 2011, with a N656,123.94 million or $444.58 \%$ increase in value to N803,707.38 million, constituting $18.43 \%$ of the total. However, this was not sustained, as in 2012, there was a similar N614,528.51 million or $76.46 \%$ decline in raw material imports to just $\mathrm{N} 189,178.84$ million or $4.41 \%$ of the total raw materials imported in the Manufacturing sector. This volatility shows he vulnerability of the

Raw Materials in 2010 by Activity

sector to changes in policy.

Despite 2011 growth in the sectors of Food Beverages and Tobacco, Textile, Apparel and Footwear and Chemical and Pharmaceutical companies, the increase from Motor vehicles and assembly meant that their shares of the total imported raw materials declined by $2.54 \%$ points, $2.72 \%$ points and $11.55 \%$ points respectively represent respective shares of $20.96 \%, 13.41 \%$ and $32.76 \%$.

## Raw Materials Locally Sourced

Locally sourced Raw Materials in 2010 were also dominated by the Chemical and Pharmaceutical industry, representing $\mathrm{N} 4,989,033.59$ million or $66.30 \%$ of the $\mathrm{N} 7,304,864.27$ million total for that year. This was followed by the Textile, Apparel and Footwear Activity, which sourced N1,273,831.63 million of local raw materials in $2010,16.13 \%$ of the total. The third greatest contributor was Food, Beverages and Tobacco, although this only contributed $\mathrm{N} 259,802.20$ million or $3.56 \%$ of the total.

The N1,261,182.74 million or $17.26 \%$ decrease in locally sourced raw materials observed in 2011 was mainly driven by the $\mathrm{N} 2,111,327.69$ million or $42.32 \%$ decline in the Chemical and Pharmaceutical activity, whose share declined by $20.68 \%$ points to $47.62 \%$ of the total. Other areas however saw increases, such as the Other Manufacturing Activity, which increased local raw material use by NN414,105.28 million or $467.83 \%$, which increased its share of the total from $1.21 \%$ to $8.32 \%$. Other increases were observed in Food, Beverages and Tobacco and Non-Metallic Products, which increased by N152,029.99 million or $58.52 \%$ and $\mathrm{N} 192,650.44$ million or $86.43 \%$ respectively.

The year 2012 saw further declines in locally sourced raw materials, of N422,813.79 million or $7.00 \%$. Again, this was mainly driven by the Chemical and Pharmaceutical activity, which saw a year on year decline of $\mathrm{N} 849,107.51$ million or $29.51 \%$, reducing its portion of the total raw materials locally sourced to $36.09 \%$. Nonetheless, declines were also seen in Wood and Wood Products, and Pulp, Paper and Paper Products, which declined by N2,916.49 million or $54.48 \%$ to $\mathrm{N} 2,437.10$ million and N4,138.00 million or $19.67 \%$ to $\mathrm{N} 16,895.35$ million respectively. The greatest increase in locally sourced raw materials in 2010 was in Food, Beverages and Tobacco, which increased by N193,812.86 million or $47.06 \%$.

## Intermediate Inputs

The greatest intermediate costs of all of the activities in the formal manufacturing sector is incurred by the Food, Beverages and Tobacco activity, with N2,982,266.50 million or $73.75 \%$ of the total intermediate inputs in 2010. This increased by N63,268.64 million or $2.12 \%$ in 2011 and N415,016.51 million in 2012, albeit at a slower rate than other sectors, so that its share declined to $68.90 \%$ and $66.53 \%$ in each year respectively.

Within this sector, the main contributor to this value is Minor Regular Repairs and Maintenance, which made up $\mathrm{N} 719,856.71$ million or $24.14 \%$ of the total in 2010, followed by PHCN bills, costing N603,587.14 million or $20.24 \%$ of the total and Generator Fuel, costing N510,627.34 million or $17.12 \%$ of the total. The value of Minor Regular Repairs and Maintenance declined by N72,644.4 million or $10.09 \%$ in 2011, only to increase by NN102,492.23 million or $15.84 \%$ the following year.

The activity with the second greatest value of intermediate inputs in Textile, Apparel and Footwear, which stood at $\mathrm{N} 485,309.15$ million in 2010. It also had the largest increase in absolute value in the two consecutive years following, at $\mathrm{N} 175,070.52$ million or $36.07 \%$ in 2011 and $\mathrm{N} 186,107.18$ million or $28.18 \%$ in 2012. There were increases in in almost all subcategories over this period. However, the main driver of this growth is the cost of Waste Disposal Bills, which at N129,903.01 million or $26.77 \%$ of the total in 2010 , grew by N35,647.30 million or $20.26 \%$ in 2011 and by N $60,101.79$ or $32.29 \%$.

# Intermediate Inputs for Food Beverages and Tobacco Activity 

Figure 16: Intermediate Inputs for Food Beverages and Tobacco

Only one activity exhibited a decline in the value of intermediate inputs over the period of review. In 2011, Electrical and Electronics declined by N1,190.95 million or $19.18 \%$ from N6,209.36 million to N5,018.41 million. Nonetheless, the intermediate input costs grew again in 2012 by N1,235.84 million or $24.63 \%$. In both of these instances, the driver of the change was the component of intermediate consumption that came from alternative sources of energy, which constituted N3,207.65 million or $51.66 \%$ of the intermediate input total in 2010 , $\mathrm{N} 2,407.85$ million or $47.98 \%$ of the total in 2011 and $\mathrm{N} 3,048.75$ million or $48.75 \%$ of the total in 2012. In 2011, it declined by N799.80 million or $24.93 \%$, whilst in 2012 it increased by a similar N640.90 million or $67.16 \%$.

## Intermediate Inputs in the Rubber and Rubber Products Activity

Figure 17: Intermediate Inputs in the Rubber and Rubber Products Activity

The highest growth in intermediate inputs over the period came from Rubber and Rubber Products, which increased by N51,664.97 million or $52.78 \%$ in 2012. This was driven by increases in the intermediate inputs associated with power; PHCN bills increased by N2,548.29 million or $36.23 \%$ in 2011 and N6,407.30 million or $66.87 \%$ in 2012; generator fuel increased by N3, 672.16 million or $21.61 \%$ in 2011 and by N9,098.73 million or $44.04 \%$ in 2012 and other alternative sources increased by N4,072.41 million or $11.07 \%$ in 2011 and by N14,790.22 million or $36.19 \%$ in 2012.

## Appendix I

Table 1.0: Employment (Number of Persons)

|  | Total Engaged |  |  | Total Paid |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^0]:    
    ${ }^{1}$ In 2013, Nigeria released the results of its G DP rebasing estimates. Rebasing is when the base year used to calculate GDP estimates is changed. The base year is the reference year, to which prices and output are compared to in future years. Using prices from a single year provides an anchor, so that GDP output can be compared through time, without the distortions that price effectscreate. So, as price structureschange in the economy, it becomes necessary to periodic ally move this base year.
