PREFACE

This publication provides data on Quarterly Gross Domestic Product (GDP) estimates using the EXPENDITURE and INCOME approach for the four quarters of 2019.

Quarterly National Accounts (QNA) are integrated system of macroeconomic accounts designed to describe the entire system of production in a nation on a quarterly basis. They provide a picture of the current economic status of the economy that is more timely and frequent than that provided by Annual National Accounts (ANA). The key attribute of QNA is that they provide a reasonable level of details of the economy that help government to assess, analyze, and monitor economic growth on a regular basis. QNA adopts the same concepts, definitions and structure as ANA. In principle QNA covers the entire sequence of accounts and balance sheets as reflected in the 2008 System of National Accounts (2008 SNA).

The estimates herein are from a wide variety of sources including expenditure surveys, government accounts from the three tiers (Federal, States and Local governments), trade statistics from the Nigerian Customs Services, Nigeria's Balance of Payments BOP compiled by the Central Bank of Nigeria and business/establishment survey among others.

We are grateful to the various agencies and establishments that made their data available as input to the estimates.

1. GDP By Expenditure

The Gross Domestic Product (GDP) can be derived as the value of all goods and services available for final uses and export. GDP at market prices includes net taxes on products; taxes are subtracted to obtain basic price GDP.

The expenditure approach measures the final uses of the produced output as the sum of Final consumption, Gross Capital Formation and Exports less Imports, which are considered in turn in this report. Consumption of fixed capital—a measure of depreciation of assets—comprises the difference between Gross Domestic Product (GDP) and Net Domestic Product (NDP) and is also considered in this report.

In 2019, the Gross Domestic Product grew in real terms by 2.27% year-on-year. This was a significant improvement compared to 1.91% recorded in 2018, and 0.82% recorded in 2017.

Household Final Consumption Expenditure:

This consists of expenditure, including imputed expenditure, incurred by resident households on individual consumption goods and services. This is calculated as a residual.

General Government Final Consumption Expenditure:

This consists of expenditure, including imputed expenditure, incurred by government at all levels on both individual and collective consumption goods and services. Individual consumption items are those that are provided to individual households, such as education and health services. Collective consumption items relate to goods and services utilised by society as a whole, such as security and infrastructure.

Not for Profit Institutions Serving Households Final Consumption Expenditure

This consists of expenditure, including imputed expenditure, incurred by Not-for-Profit-Institutions-Serving-Households, which consist of organisations such as charities and non-government organisations.

Gross Fixed Capital Formation

This is measured as the total value of producer's acquisitions, less disposals, of fixed assets during the accounting period, plus certain additions to the value of non-produced assets (such as improvements to natural assets) realised by the productive activity of institutional units.

Change in Inventories

This is measured as the total value of producer's acquisitions, less disposals, of fixed assets during the accounting period, plus certain additions to the value of non-produced assets (such as improvements to natural assets) realised by the productive activity of institutional units.

Change in Inventories

is the consist of changes in; stocks of outputs that are still held by units that produced them prior to their being further processed , sold, delivered to other units or used in other ways, measure by the value of the entries into inventories less the value of withdrawals and the value of any recurrent losses of goods held in inventories.

Exports of Goods and Services

Consists of sales of goods and services to residents abroad, from residents within Nigeria

Imports of Goods and Services

Consists of sales of goods and services from residents abroad, to residents within Nigeria

Consumption of Fixed Capital

This represents the reduction in value of the fixed assets used in production during the period, that results from physical deterioration, normal obsolescence or normal accidental damage.

2. National Disposable Income

National Disposable Income (NDI) is equal to national income, plus net other current transfers from the rest of the world. It measures all of the income which is available for use by residents and firms in Nigeria. It differs slightly from GDP which can be thought of as the sum of all income produced in the economy, as some income produced in Nigeria is transferred to the rest of the world, and vice versa.

National Income is calculated as the sum of domestic factor income (compensation of employees and operating surplus), external income (net compensation of employees and property income from the rest of world) and net taxes on production.

Compensation of Employees

This consists of total remuneration of employees in the formal sector, including both wages and salaries, and benefits in kind (such as pensions)

Operating Surplus

This is equal to the profit that remains for firms after costs have been covered. It includes the profit of those who are self-employed, which is often included in the national accounts under the entry “Mixed Income”. It is calculated as a residual.

Compensation of Employees from rest of world (net)

This is the same as domestic compensation of employees, other than that the remuneration is earned from institutional units not resident within Nigeria.

Property and entrepreneurial income from rest of world (net)

This is equal to operating surplus earned from non-resident units, plus property income earned from assets owned, minus interest payable in liabilities and rents payable on land or other tangible assets held abroad.

Other Current Transfers from rest of world (net)

These consist of transfers from non-resident units that are included as either compensation of employees or property and entrepreneurial income. They can include items such as remittances or net premiums and claims for non-life insurance.

Net taxes on Products

This represents total taxes payable on products, minus any subsidies received for the product.

3. Capital Finance

Capital finance is the sum savings, and consumption of fixed capital. It is equal to gross accumulation of capital; as all savings in the economy are invested, either as gross fixed capital formation, inventories, or as loans to the rest of the world. As with the difference between GDP and NDP (net domestic product) the word “gross” refers to the fact that consumption of fixed capital is included. Subtracting this value gives net capital accumulation.

Savings	Savings is measured as the difference between National Disposable Income and total consumption expenditure (of households, government and Not-for-Profit-Institutions-Serving-Households)
Finance of Gross Accumulation	This is equal to Savings + Consumption of Fixed Capital
Consumption of Fixed Capital	See chapter 1
Gross Fixed Capital Formation	See chapter 1
Change in Inventories	See chapter 1
Net lending to the rest of the world	This represents savings, minus the value of acquisitions less disposables of financial assets, less the consumption of fixed capital. Essentially it is the amount that resident units in Nigeria are able to finance non-resident units.

3.1 Capital Finance– Savings and Net Lending

Savings

In 2019, nominal savings rose 17.73% in Q2, 63.84% in Q3 and 20.75% in Q4 year on year, reaching annual growth rate of 39.17%. Overall, this was stronger performance relative to 2018 which recorded 26.86% annual growth rate in nominal savings.

In real terms, savings grew by 4.52% in Q2, 2.1% in Q3 before declining -5.70% in Q4. For 2019, real savings grew by 2.92% compared to 2018 when it contracted -12.8%. Quarter on quarter, growth in savings was more sluggish, declining by -4.03% in Q2, rising 15.03% in Q3 but declining again in Q4 by -7.95%.

Net Lending to Rest of the World

Net Lending to rest of the world, in nominal terms, declined by over -200% in Q2 but moderated in Q3 to -48.41% and turned positive in Q4 to grow at 124.68% on a year on year basis. For 2019, nominal net lending grew by over 500% compared to a contraction of -133% in 2018.

In real terms, net lending year on year declined by -13% in Q2, -4.79% in Q3 and -13.4% in Q4 for an annual growth rate of -6.50% in 2019. This was, however, an improvement compared to the growth rate recorded in 2018 (-21.07%).
