PREFACE

This publication provides data on Quarterly Gross Domestic Product (GDP) estimates using the EXPENDITURE and INCOME approach for the four quarters of 2019, annual 2019 as well as the first two quarters of 2020.

Quarterly National Accounts (QNA) are integrated system of macroeconomic accounts designed to describe the entire system of production in a nation on a quarterly basis. They provide a picture of the current economic status of the economy that is more timely and frequent than that provided by Annual National Accounts (ANA). The key attribute of QNA is that they provide a reasonable level of details of the economy that help government to assess, analyze, and monitor economic growth on a regular basis. QNA adopts the same concepts, definitions and structure as ANA. In principle QNA covers the entire sequence of accounts and balance sheets as reflected in the 2008 System of National Accounts (2008 SNA).

The estimates herein are from a wide variety of sources including expenditure surveys, government accounts from the three tiers (Federal, States and Local governments), trade statistics from the Nigerian Customs Services, Nigeria's Balance of Payments BOP compiled by the Central Bank of Nigeria and business/establishment survey among others.

We are grateful to the various agencies and establishments that made their data available as input to the estimates.

Summary – analysis of expenditure components

The graph below depicts the proportions of real GDP expenditure components from Q1 2017 to Q2 2020, as well as real GDP growth rates over the same period.

Household Consumption accounted for the largest share of real Gross Domestic Product at market prices, representing 54% in Q1 and 63% in Q2, 2020 compared to 58% and 59% for the same periods of 2019. **Net Exports**, which represented 21% of total real GDP in Q1 2020, however declined considerably in Q2 to 7%. In its place, **General Government Consumption expenditure** more than doubled its share in Q2 to 15%, compared to 6% in Q1 2020. **Gross Fixed Capital Formation** accounted for 17% of real GDP in Q1, which declined slightly to 14% in Q2 2020. The share of **Non-Profit Institutions Serving Households (NPISH)** remained at less than 1% over the period, recording 0.6% in Q1 and 0.7% in Q2 2020.

1. GDP By Expenditure

The Gross Domestic Product (GDP) can be derived as the value of all goods and services available for final uses and export. GDP at market prices includes net taxes on products; taxes are subtracted to obtain basic price GDP.

The expenditure approach measures the final uses of the produced output as the sum of Final consumption, Gross Capital Formation and Exports less Imports, which are considered in turn in this report. Consumption of fixed capital—a measure of depreciation of assets—comprises the difference between Gross Domestic Product (GDP) and Net Domestic Product (NDP) and is also considered in this report.

In Q2 2020, the Gross Domestic Product declined in real terms by -6.10% year-on-year. This was a significant contraction following slower but still positive growth in Q1 2020 recorded at 1.87%, and 2.12% recorded in Q2 2019. The decline in growth occurred against the backdrop of severe restrictions on economic activity in Q2 as part of the national response to curtailing the COVID-19 pandemic which emerged in late 2019.

Household Final Consumption Expenditure:

This consists of expenditure, including imputed expenditure, incurred by resident households on individual consumption goods and services. This is calculated as a residual.

General Government Final Consumption Expenditure:

This consists of expenditure, including imputed expenditure, incurred by government at all levels on both individual and collective consumption goods and services. Individual consumption items are those that are provided to individual households, such as education and health services. Collective consumption items relate to goods and services utilised by society as a whole, such as security and infrastructure.

Not for Profit Institutions Serving Households Final Consumption Expenditure

This consists of expenditure, including imputed expenditure, incurred by Not-for-Profit-Institutions-Serving-Households, which consist of organisations such as charities and non-government organisations.

Gross Fixed Capital Formation

This is measured as the total value of producer's acquisitions, less disposals, of fixed assets during the accounting period, plus certain additions to the value of non-produced assets (such as improvements to natural assets) realised by the productive activity of institutional units.

Change in Inventories

is the consist of changes in; stocks of outputs that are still held by units that produced them prior to their

being further processed , sold, delivered to other units or used in other ways, measure by the value of the entries into inventories less the value of withdrawals and the value of any recurrent losses of goods held in inventories.

Exports of Goods and Services

Consists of sales of goods and services to residents abroad, from residents within Nigeria.

Imports of Goods and Services

Consists of sales of goods and services from residents abroad, to residents within Nigeria.

Consumption of Fixed Capital

This represents the reduction in value of the fixed assets used in production during the period, that results from physical deterioration, normal obsolescence or normal accidental damage.

1.1 GDP Expenditure - Final Consumption Components

Household Final Consumption

Household final consumption, in real terms, contracted by -4.03% and -0.08% in Q1 and Q2 2020 on a year on year basis, compared to -2.68% and 0.75% in the corresponding period of 2019. For the first half of 2020, real household final consumption expenditure contracted by -1.99%, compared to -0.94% in 2019. The observed trend in 2020 indicates that real household consumption expenditure remains weak, maintaining its contractionary trend from 2019.

On a quarter on quarter basis, real household consumption expenditure grew by 10.7% in Q2 2020 but this was recorded against a significant drop in the preceding quarter (Q1 2020), which had recorded a contraction of 23.36%.

In nominal terms, household final consumption expenditure grew by 8.62% in Q1 2020 but contracted -15.96% in Q2 2020, year on year, bringing nominal growth rate for the first half of 2020 to -4.20% compared to 11.22% for the first half of 2019.

On a quarter on quarter basis, growth was recorded at -16.25% in Q1 and -15.64% in Q2 2020 compared to -15.14% and 9.03% in Q1 and Q2 2019.

Household consumption accounted for 63.11%, of real GDP at market prices in Q2 2020, an increase of 3.7 percentage points when compared to Q2 2019.

2. National Disposable Income

National Disposable Income (NDI) is equal to national income, plus net other current transfers from the rest of the world. It measures all of the income which is available for use by residents and firms in Nigeria. It differs slightly from GDP which can be thought of as the sum of all income produced in the economy, as some income produced in Nigeria is transferred to the rest of the world, and vice versa.

National Income is calculated as the sum of domestic factor income (compensation of employees and operating surplus), external income (net compensation of employees and property income from the rest of world) and net taxes on production.

Compensation of Employees

This consists of total remuneration of employees in the formal sector, including both wages and salaries, and benefits in kind (such as pensions).

Operating Surplus

This is equal to the profit that remains for firms after costs have been covered. It includes the profit of those who are self-employed, which is often included in the national accounts under the entry "Mixed Income". It is calculated as a residual.

Compensation of Employees from rest of world (net)

This is the same as domestic compensation of employees, other than that the remuneration is earned from institutional units not resident within Nigeria.

Property and entrepreneurial income from rest of world (net)

This is equal to operating surplus earned from non-resident units, plus property income earned from assets owned, minus interest payable in liabilities and rents payable on land or other tangible assets held abroad.

Other Current Transfers from rest of world (net)

These consist of transfers from non-resident units that are included as either compensation of employees or property and entrepreneurial income. They can include items such as remittances or net premiums and claims for non-life insurance.

Net taxes on Products

This represents total taxes payable on products, minus any subsidies received for the product.

3. Capital Finance

Capital finance is the sum savings, and consumption of fixed capital. It is equal to gross accumulation of capital; as all savings in the economy are invested, either as gross fixed capital formation, inventories, or as loans to the rest of the world. As with the difference between GDP and NDP (net domestic product) the word “gross” refers to the fact that consumption of fixed capital is included. Subtracting this value gives net capital accumulation.

Savings	Savings is measured as the difference between National Disposable Income and total consumption expenditure (of households, government and Not-for-Profit-Institutions-Serving-Households).
Finance of Gross Accumulation	This is equal to Savings + Consumption of Fixed Capital.
Consumption of Fixed Capital	See chapter 1
Gross Fixed Capital Formation	See chapter 1
Change in Inventories	See chapter 1
Net lending to the rest of the world	This represents savings, minus the value of acquisitions less disposables of financial assets, less the consumption of fixed capital. Essentially it is the amount that resident units in Nigeria are able to finance non-resident units.
