CONSUMER PRICE INDEX (BASE PERIOD NOVEMBER 2009 = 100)

No. 518 APRIL2013

BRIEF METHODOLOGY:

The CPI measures the average change over time in prices of goods and services consumed by people for day-to-day living. The construction of the CPI combines economic theory, sampling and other statistical techniques using data from other surveys to produce a weighted measure of average price changes in the Nigerian economy. The weighting occurs to capture the importance of the selected commodities in the entire index. The production of the CPI requires skills of economists, statisticians, computer scientists, data collectors and others.

Key in the construction of the price index is the selection of the market basket of goods and services. Every month, 10,534 informants spread across the country provide price data for the computation of the CPI.The market items currentlycomprise of 740 goods and services regularly priced.

The first stage in the calculation of the CPI is the collection of prices on each item (740 goods and services) from outlets in each sector (rural or urban) for each state. Prices are then averaged for each item according to sector across the state. The next step is to use the average price to calculate the basic index for each commodity: The current year price of each commodity is compared with a base year's price to obtain a relative price.

Next we use the Laspeyres formula to compute an aggregated index for each class (which has a multitude of commodities which have similar consumption purposes): Here the sum of the product of weights (obtained from the expenditure

survey) and relative prices for each item is divided by the sum of the weight of the items in that class, and the result multiplied by 100 gives the required index number. This index number is still classified according to the urban or rural classification sector for each of the 36 states and the FCT. This yields 85 classes then 48 groups which are then reclassified into 12 Divisions derive:

- 1. The country composite index
- 2. The Urban National index
- 3. The Rural National index
- 4. The Combined Urban and Rural State Composite index

The survey methodology generates 3774 all items indices for all states and the FCT.

This edition of the Statistical News contains the revised Consumer Price Index (CPI) based on Nigeria Living Standard Survey (NLSS) 2003/2004. The consumption expenditure data were re-valued to November 2009, which is the base period for the revised CPI.

The May 2003 and September 1985 based indices are being continued using factors derived from the new CPI. All of these indices will yield the same price change for any commodity group contained in all the series. A new sub index – Imported Food Index- is available in the revised CPI.

Note: The urban and rural indices were weighted with the ratio of their populations to the national i.e. 0.455 and 0.545 respectively to compute the composite indices at the 12 COICOP functions and all items levels. This may cause variance

between a recalculated all items index using the weights published on table 2 and the published all items index because the published weights were computed only from

consumption expenditure survey result. The following breakdown highlights a non-exhaustive list of the components of the current CPI:

FOOD AND NON ALCOHOLIC BEVERAGES

Food

Bread and cereals

Meat

Fish

Milk, cheese and eggs

Oils and fats

Fruit

Vegetables

Potatoes, Yam & other tubers

Food products n.e.c

Coffee, tea and cocoa

Soft drinks

ALCOHOLIC BEVERAGES, TOBACCO AND KOLA

Spirits

Wine

Tobacco

Narcotics

CLOTHING AND FOOTWEAR

Clothing materials, other articles of clothing

Garments

Cleaning, repair and hire of clothing

Shoes and other footwear

Repair and hire of footwear

HOUSING, WATER, ELECTRICITY, GAS

Actual and imputed rentals for housing

Water supply

Miscellaneous services relating to the dwelling

Electricity

Gas

Liquid fuel

Solid fuels

FURNISHINGS, HOUSEHOLD EQUIPMENT

Furniture and furnishings

Carpets and other floor coverings

Repair of Furniture

Household textiles

Major household appliances whether electric or not

Repair of household appliances

Glassware, tableware and household utensils

Non-durable household goods

Domestic services and household services

HEALTH

Pharmaceutical products

Medical services

Dental services

Paramedical services

Hospital services

TRANSPORT

Motor cars

Motor cycles

Bicycles

Vehicle spare parts

Fuels and lubricants for personal transportation

Maintenance and repair of personal transport

Passenger transport by road

Passenger transport by air

Passenger transport by sea and inland waterways

COMMUNICATION

Postal services

Telephone and telefax equipment

Telephone and telefax services

RECREATION AND CULTURE

Audio-visual, photographic and information processing equipments

Photographic development

Musical instrument

Recreational and sporting services

Games of chance

EDUCATION

Books & stationery

RESTAURANTS AND HOTELS

Catering services

Accommodation services

MISCELLANEOUS GOODS AND SERVICES

Hairdressing salons and personal grooming establishments

Appliances, articles and products for personal care

Jewellery, clocks and watches

Insurance

Other services.

ALL ITEMS INDEX

In April 2013 the Consumer Price Index (CPI), which measures inflation, rose by 9.1 percent year-on-year (compared to 8.6 per cent in March). This is the fourth consecutive month of single digit year-on-year rates being recorded, and the first time this has occurred since the movement to the new CPI base period.

Relative to March, the rise in the headline index could be primarily attributed to higher price levels of food products due to the effect of declining inventories. At this time in the planting season, what is sold are food products which were harvested, late last year and the limited supplies of these farm with a relatively stable demand, pushes prices higher.

As in March, the Core sub-index exhibited a muted rise due to base effects. Between March 2012 and December 2012, the Core Sub-index recorded substantial year-on-year price increases (an average of 14.2% compared to 11.8% over the same period in 2011). As a result of substantially higher price levels last year, the implications are that the year-on-year changes for this year are likely to be lower.

Additionally, we observed generally slower rises in monthly prices since 2013. This may be connected to more prudent fiscal measures together with aggressive stance of monetary policy.

It should be noted that the Headline Index is made up of the Core Index and Farm Produce items. As Processed Foods are included in both the Core and Food sub-indices, this implies that these sub-indices are not mutually-exclusive.

COMPOSITION OF THE MAJOR INDEX AND SUB-INDICES

All Items = Farm Produce + Core index

Food = Farm Produce + Processed Foods

Core = All Items – Farm Produce

In April, the composite CPI increased by 0.55 percent from index levels recorded in March. The Urban composite CPI was recorded at 143.7 in April, indicating a 9.7 per cent year-on-year change. This was higher than the 9.3 per cent recorded in March. The corresponding Rural National CPI recorded an 8.9 per cent year-on-year change, up from 8.1 per cent in March.

On a month-on-month basis, the Urban All-item index increased by 0.6percent in April from levels recorded in March, while the Rural All Items index increased from levels recorded in March by 0.8 percent. Both Rural and Urban indices recorded roughly the same month-onmonth rate change as reported in March.

The percentage change in the average Composite CPI for the twelve-month period ending in April 2013 over the average of the CPI for the previous twelve-month period was recorded at 11.1 percent. The corresponding 12-month year-on-year average percentage change for the Urban index was 13.0 percent, while the corresponding Rural index was 9.7 percent.

FOOD INDEX

In April, the composite Food Index increased year-on-year by 10.0 percent to 145.6 points. This was 0.5 percentage points higher than the 9.5 percent recorded in March.

On a month-on-month basis, the Food index increased by 0.6 percent between March and April. As in March, food prices were higher across all classes in the food sub-index. According to their contribution, the largest contributors of the increase in

the food index in April were bread and cereals, potatoes, yams and other tubers, and vegetables.

The average annual rate of rise of the food index for the twelve-month period ending April 2013 was 10.8 percent when compared with the same period in 2012. This was lower by 0.2 percentage points from the 11.0 per cent recorded in March.

ALL ITEMS LESS FARM PRODUCE

In April, the "All items less Farm Produce" or Core index, which excludes the prices of volatile agricultural products (but includes "processed foods") increased by 6.9 percent year-on-year. This was lower than 7.2 percent recorded in March. As in March, all COICOP classes that contributed to the Core exhibited muted rises compared to rates recorded earlier in the year due to base effects. On month-on-month basis, the Core index slowed by 0.2 percent from March to April 2013, as classes of the core index

witnessed muted increases coupled with the relative stability in prices of processed foods pulling the overall core sub-index. We have observed that the core index has increased generally at a decreasing rate since 2013 which, in addition to base effects, has contributed to slower rises in inflation. The average 12 month annual rate of rise of the index was recorded at 12.3 percent for the twelve-month period ending in April 2013, down by 0.7 percentage points from March 2013.
