

18 NOV 2015

NATIONAL BUREAU OF STATISTICS

Nigerian Gross Domestic Product Report (expenditure approach) Q2 2015

PREFACE

This publication provides data on Quarterly Gross Domestic Product (GDP) by the **EXPENDITURE** approach estimates for the Second Quarter of 2015. It also contains quarterly estimates from 2010-2014

Quarterly National Accounts (QNA) are integrated system of macroeconomic accounts designed to describe the entire system of production in a nation on a quarterly basis. They provide a picture of the current economic status of the economy that is more timely and frequent than the that provided by Annual National Accounts (ANA). The key attribute of QNA is that they provide a reasonable level of details of the economy that help government to assess, analyze, and monitor economic growth on a regular basis. QNA adopts the same concepts, definitions and structure as ANA. In principle QNA covers the entire sequence of accounts and balance sheets as reflected in the 2008 System of National Accounts (2008 SNA).

The estimates herein are from a wide variety of sources including expenditure surveys, government accounts from the three tiers (Federal States and Local governments), trade statistics from the Nigerian Customs Services, Nigeria's Balance of Payments BOP compiled by the Central Bank of Nigeria and business/establishment survey among others.

We are grateful to the various agencies and establishments that made their data available as input to the estimates.

**Dr. Yemi Kale,
Statistician General, of the Federation
National Bureau of Statistics,
Abuja – Nigeria.
November, 2015**

EXECUTIVE SUMMARY

Total expenditure on GDP measured in real terms increased by 2.30 percent (year-on-year) in Q2 of 2015* while year on year nominal changes indicated an increase of 5.12 percent in the quarter. Final consumption expenditure of households accounted for the largest share of expenditure at 74.04 percent of total expenditure on GDP at nominal market prices, an increase on both the previous and Q2 of 2014. Final consumption expenditure of households recorded a nominal growth quarter-on-quarter of 8.78 percent and strong year-on-year growth of 14.70 percent. In real terms, Final consumption expenditure of households recorded year-on-year and quarter-on-quarter growth rate of 11.79 percent and 0.96 percent respectively.

Representing 5.87 percent of the total expenditure on nominal GDP, General Government final expenditure decreased year-on-year by 11.81 percent. In real terms this decrease was more pronounced; general government final expenditure fell by 14.83 percent relative to Q2 2014, and by 10.75 percent relative to its level in the previous quarter.

Nominal expenditure on Gross Fixed Capital Formation (Investment) increased on the year, but by a smaller degree than in the first quarter of 2015. Investment in non-residential buildings was the main driver in growth for the second quarter of 2015; other components such as transport equipment and machinery saw declines. These trends were mirrored in real terms.

Net exports of goods and services accounted for 2.85 percent of nominal GDP at market prices, a decline from 7.77 percent in the same quarter of the previous year. Exports declined by 37.61 percent over this period; a decline only partially counteracted by the 24.31 percent decline in imports. Accordingly, whereas the net export balance remained positive, the gap between the value of exports and the value of imports narrowed.

Compensation of Employees (COE) returned to growth of 0.11 percent year on year in nominal terms, after the decline of 2.49 percent in the first quarter of 2015. In real terms however, COE declined by of 8.11 percent.

National disposable income grew in nominal terms by 6.09 percent (year on year) in Q2 2015. During this period, household consumption accounted for 77.68 percent of national disposable income and 15.87 percent of income was devoted to savings, which was higher than in the previous quarter but lower than the corresponding quarter of last year.

*Some revisions to data for 2014 through to 2015 Q1, as a result of finalisation of previous Balance of Payments and fiscal estimates

Definition of main aggregates

The concepts and definitions used in this publication are those stated in the United Nations System of National Accounts (SNA) Manual - A System of National Accounts 2008.

Taxes on production and imports: Taxes on production and imports comprise all taxes that enterprises incur by engaging in production. There are two categories of taxes, namely taxes on products and other taxes on production.

Taxes on products are payable on goods and services when they are produced, sold or used. Examples are excise duties, import duties and Value Added Taxes (VAT).

Other taxes on production are taxes payable out of the value added of producers. This category of taxes includes taxes levied on property, fixed assets and labour employed. Examples are municipal rates, motor vehicle licenses and business licenses.

GDP at basic prices: GDP at basic prices is obtained as the difference between output and intermediate consumption whereby output is valued at basic prices and intermediate consumption at purchasers' prices.

GDP at market prices: GDP at market prices is equal to the GDP at basic prices plus taxes (net of subsidies) on products.

Gross National Income (GNI): GDP plus net primary income from the rest of the world gives Gross National Income (GNI).

Gross National Disposable Income (GNDI): The sum of Gross National Income (GNI) and net transfers from the rest of the world gives Gross National Disposable Income (GNDI).

Gross Domestic Fixed Capital Formation (GDFCF): Gross Domestic Fixed Capital Formation (GDFCF) consists of the net additions to the assets of producers of tangible reproducible goods which have an expected lifetime of use of more than one year. These assets are buildings, plants, machinery and transport equipment, land improvement land and research and development.

Change in inventories: Change in inventories includes the value of the physical change in inventories of raw materials, work in progress and finished goods held by producers.

Final Consumption expenditure: Consumption expenditure is made up of final consumption expenditure of households and of government.

Final consumption expenditure of general Government is further disaggregated into collective and individual consumption expenditure.

Collective consumption expenditure of general government consists of the services which government provides to the community as a whole, for example, security and defence whereas

Individual consumption expenditure of general government is made up of expenses incurred in providing services which are mostly beneficial to individuals, mainly in respect of health and education.

Final consumption expenditure of households comprises the value of goods and services purchased by households including the value of imputed rent of owner occupied dwellings.

Gross National Saving: Gross National Disposable Income (GNDI) less total final consumption expenditure gives Gross National Saving.

Exports and Imports of goods and services: Both exports and imports are measured on an f.o.b. basis.

Compensation of employees: Compensation of employees comprises all payments of wages and salaries by producers to their employees. Payments in kind and contributions to social security and to private pension fund, casualty insurance and similar schemes are also included.

Gross operating surplus: Gross operating surplus is defined as the excess of value added over the cost of employees' compensation and other taxes on production and imports net of subsidies.

KEY HIGHLIGHTS

GDP BY EXPENDITURE

The Gross Domestic Product (GDP) can be derived as the value of all goods and services available for final uses and export. The expenditure approach measures the final uses of the produced output as the sum of Final consumption, Gross Capital Formation and Exports less Imports.

$$\text{GDP}(Y) = C + G + I + X - M$$

Where:

C is Household Final Consumption Expenditure

G is Government Final Consumption Expenditure

I is Gross Domestic Investment

X is exports

M is Imports

Figure 1: Quarter on same quarter a year earlier growth in GDP (nominal)

GDP at current market value of goods and services in Nigeria (nominal) increased by 5.12 percent, from N 21,957.45 billion in the second quarter of 2014, to N23,080.91 billion in the second quarter of 2015. This growth rate was higher than the previous quarter, but lower than the average growth rate in 2014. To a large extent, this reduction has been driven by the recent fall in oil prices, which has decreased Nigeria's net exports.

At basic prices (not including taxes and subsidies) GDP grew by 5.17 percent. Net taxes on products (taxes less subsidies) have been rising less quickly, and less consistently than GDP at market prices, which means that the difference between basic price and market GDP has been decreasing. This trend continued in the most recent period: net taxes fell by 0.39 percent relative to the second quarter of 2014, which explains why growth in basic price GDP was slightly higher than growth in market price GDP

Expenditure on GDP in real terms (at 2010 prices) stood at N16,623.05 billion in the second quarter of 2015, compared with N16,249.37 billion recorded in the corresponding quarter of 2014, representing a growth rate of 2.30 percent. This is the lowest growth in real GDP recorded since 2011; growth in the same period in 2014 was 6.47 percent.

KEY HIGHLIGHTS

Analysis of Growth of Expenditure components

Although growth in total GDP grew by 5.12 percent in nominal terms between 2015 Q2 and 2014 Q2, this hides differing trends in the growth rates of its components.

Figure 2 shows the contributions that each expenditure component made to year on year GDP growth. These are calculated as the growth of each component weighted by their importance to GDP, so that the sum of the bars in each quarter is equal to the growth rate in GDP. It reveals that for most quarters, household consumption is an important driver of growth. However since the last quarter of 2014, this has been counteracted by net exports, which have been a drag on growth. In addition, government consumption has contributed negatively to growth, but to a lesser extent, due to a smaller contraction.

Figure 2: Percentage point contributions to quarter on same quarter a year previous growth rates, of main expenditure components, and total GDP growth (market prices)

In the second quarter of 2015, crude oil accounted for 73.68 percent of the value of all merchandise exports (see [Foreign Trade Statistics Q2 2015](#) for more detail). Therefore the dramatic fall in oil prices, which began in the Third quarter of 2014, necessarily had a large effect on this component of expenditure, and helps to explain why net exports have been negative since this time. The price of crude oil nearly halved between the third quarter of 2014 and the second quarter of 2015.

Oil revenue also accounts for a large portion of government revenue, which could also explain why government final consumption contributed negatively to growth.

Components

FINAL CONSUMPTION EXPENDITURE OF HOUSEHOLD

In nominal terms, household final consumption expenditure rose from N14,899.24 billion in the Second Quarter of 2014 to N17,089.56 billion in the Second Quarter of 2015. This represents a growth of 14.70 percent, considerably higher than growth in total nominal Gross Domestic Product. Therefore, the share of household consumption in GDP increased between these periods, from 67.86 percent to 74.04 percent. Relative to the previous quarter, household consumption grew by 8.78 percent. However, household consumption remains lower than its peak of N18,332.28 billion, which was reached in the final quarter of 2014.

In real terms, growth was 11.79 percent, from N9,690.41 billion in the second quarter of 2014 to N10,833.04 billion in the second quarter of 2015. This was the strongest growth since the last quarter of 2013. In addition, growth in household consumption has out-paced growth in GDP for the last three quarters in real terms.

Household consumption is the largest component of expenditure on GDP, meaning that growth in this measure accounts for a large part of overall growth. Its share of GDP in real terms was recorded at 65.17 percent in the Second Quarter of 2015, up from its corresponding share a year earlier by 5.53 percentage points

GENERAL GOVERNMENT FINAL CONSUMPTION EXPENDITURE

In nominal terms, general government final consumption expenditure (GFCE) fell by 11.81 percent between the second quarter of 2015, and the same quarter of 2014, from N1,535.74 billion to N1,354.37 billion. This meant that the share of GDP accounted for by GFCE fell, from 6.99 percent to 5.87 percent. This was the lowest share since 2010.

In constant 2010 prices, GFCE was N936.59 billion in the second quarter of 2015, the lowest level since the first quarter of 2010. This represents a decrease of 14.83 percent since the same quarter of 2014, when GFCE stood at N1,099.71 billion. This decrease can be attributed to the drop in the oil price, which adversely affected government revenues. In real terms GFCE accounted for 5.63 percent of expenditure on GDP, lower from the corresponding quarter in 2014 by 1.13 percentage points.

GROSS FIXED CAPITAL FORMATION (INVESTMENT)

The gross fixed capital formation (GFCF) captures investment activities carried out in the economy. Investment in the second quarter of 2015 reached N3,747.17 billion in nominal terms, representing an increase of 4.47 percent compared to the same quarter of the previous year. In contrast, GFCF grew by 7.49 percent in real terms over the same period. The largest changes in the components of GFCF in real terms came from transport equipment, for which investment was 45.36 percent lower than the same quarter of 2014, and machinery, for which investment was 29.88 percent lower. However as these components are a small part of the total the effect on GFCF was small. Investment in non-residential buildings grew by 12.84 percent, and this component now accounts for 77.62 percent of total GFCF in real terms. This figure has increased from 53.15 percent since the start of 2010.

As a share of expenditure on real GDP, GFCF accounted for 18.14 percent, 0.88 percentage points lower from its share recorded in the corresponding quarter of 2014.

CONSUMPTION OF FIXED CAPITAL

On a nominal basis, Consumption of Fixed Capital - depreciation- increased by 5.82 percent (year-on-year) in the second quarter of 2015, and by 14.63 percent on the previous quarter, although the series is volatile on a quarterly basis. Consumption of fixed capital was 31.07 percent of gross fixed capital formation, implying that roughly a third of investment performed is required to maintain the stock of fixed capital.

In real terms, developments exhibited the a similar pattern as in nominal terms. Consumption of Fixed Capital increased by 2.69 percent year-on-year, and increased by 13.57 percent quarter on quarter.

NET EXPORTS OF GOODS AND SERVICES

Net exports had a relatively large negative effect on GDP growth in the second quarter of 2015, partly counteracting the more robust growth in final consumption expenditure by households.

In nominal terms exports decreased by 37.61percent relative to the same quarter of 2014; representing a larger contraction than in the previous quarter when growth was 31.89 percent. The net effect was mitigated to some extent by a decrease in imports of 24.31percent in nominal terms. Nevertheless, net exports reduced by 61.45 percent.

In real terms however, the fall in net exports was less pronounced, largely due to imports falling by 37.03 percent between 2015 Q2 and the same quarter the previous year. At 2010 prices, the value of exports was N2,863.07 billion in the second quarter of 2015, a decline of 35.06 percent year-on-year. Consequently, net exports stood at N1,639.47 billion, accounting for 9.86 percent of GDP at 2010 market prices.

COMPENSATION OF EMPLOYEES

In nominal terms, compensation of employees (COE) was broadly the same in 2015 Q2 as it was in the same quarter of 2014, increasing by only 0.11percent. However, given an increase in the deflator of 8.94 percent over the period, (reflecting price increases) this meant a fall in real terms of 8.11percent. Hence, whereas as COE was N4,522.40 billion in 2014 Q2, it had fallen to N4,155.79 in 2015 Q2.

NATIONAL DISPOSABLE INCOME AND SAVINGS

National disposable income (NDI) grew in nominal terms by 6.09 percent in Q2 2015, from N20,738.61 billion in the same quarter of 2014 to N22,001.25 billion. Growth was however 5.33 percentage points lower when compared to rates recorded in the corresponding quarter of 2014. Relative to the previous quarter, NDI was up by 10.62 percent. In 2015 Q2 the proportion of nominal NDI that was allocated to savings was 15.87 percent, which represents an increase on the previous quarter (when 13.00 percent was saved) but a decrease relative to the same quarter a year earlier, when 20.47percent was saved.

OPERATING SURPLUS

In Nominal terms, Operating Surplus (OS)—the excess value added over the cost of employees' compensation, depreciation and other taxes on production and imports net of subsidies— was estimated to be N15,217.08 billion in the Second Quarter of 2015, representing a 7.36 percent increase from the N14,173.26 billion recorded in the corresponding quarter of 2014. This growth rate was marginally higher (0.22 percentage points) than in the previous quarter, but nevertheless slow relative to the growth rates recorded between 2011 and 2014. On the previous quarter, OS increased by 7.40 percent. As a share of expenditure on GDP, OS was recorded at 65.93 percent in the Second Quarter of 2015, higher from shares recorded in the Second Quarter of 2014 by 1.38 percentage points.

In real terms, OS was estimated to be N11,205.18 billion at 2010 prices in the Second Quarter of 2015, representing a 6.78 percent increase on the same quarter of the previous year, when operating surplus stood at N10,493.37 billion. As a share of expenditure on real GDP, Operating Surplus was recorded at 67.41 percent in the Second Quarter of 2015, 2.83 percentage points higher from the share recorded in the corresponding quarter in 2014.

NET TAXES ON PRODUCT

In nominal terms, net tax on products was recorded at N221.76 billion in the second quarter of 2015, compared to N222.62 billion in the corresponding quarter of 2014, this represented a slight decrease of 0.39 percent. On the previous quarter the Net taxes increased by 10.41 percent.

In real terms, Net taxes declined by 3.05 percent in the Second Quarter of 2015. This was 2.57 percentage points lower from growth recorded in the Second Quarter of 2014. Relative to the First Quarter of 2015, Net Taxes increased by 4.25 percent.
