

25 May 2016

NATIONAL BUREAU OF STATISTICS

**Nigerian Gross Domestic Product Report
(Expenditure and Income approach)
Q3, Q4 2015**

PREFACE

This publication provides data on Quarterly Gross Domestic Product (GDP) by the **EXPENDITURE and INCOME** approach estimates for the Third and Fourth Quarter of 2015. It also contains quarterly estimates from 2010-2014

Quarterly National Accounts (QNA) are integrated system of macroeconomic accounts designed to describe the entire system of production in a nation on a quarterly basis. They provide a picture of the current economic status of the economy that is more timely and frequent than the that provided by Annual National Accounts (ANA). The key attribute of QNA is that they provide a reasonable level of details of the economy that help government to assess, analyze, and monitor economic growth on a regular basis. QNA adopts the same concepts, definitions and structure as ANA. In principle QNA covers the entire sequence of accounts and balance sheets as reflected in the 2008 System of National Accounts (2008 SNA).

The estimates herein are from a wide variety of sources including expenditure surveys, government accounts from the three tiers (Federal States and Local governments), trade statistics from the Nigerian Customs Services, Nigeria's Balance of Payments BOP compiled by the Central Bank of Nigeria and business/establishment survey among others.

We are grateful to the various agencies and establishments that made their data available as input to the estimates.

**Dr. Yemi Kale,
Statistician General, of the Federation
National Bureau of Statistics,
Abuja – Nigeria.
May, 2016**

Summary

- In real terms year on year growth in GDP increased in the third quarter, to 2.84%, before declining to 2.11% in the fourth quarter of 2015, which was the lowest level recorded in the rebased period.
- Both investment (gross capital formation) and consumption expenditure contributed to the fall in the fourth quarter, however a strong recovery in growth in net exports limited the fall
- National Disposable Income recorded stronger growth than GDP in the second half of 2015 in real terms, partly as a result of large increases in both compensation of employees, and property and entrepreneurial income from the rest of the world
- Real year on year growth in domestic compensation of employees however, remained significantly weaker than in previous years.

Real Year on Year growth rates of key aggregates*

	2015 Q3	2015 Q4	2015 (Annual)
GDP (basic price)	2.84	2.11	2.79
Household Consumption	3.22	-1.24	-0.33
Gov. Cons. Expenditure	-5.42	-6.11	-0.44
Gross Capital Formation	-1.28	-4.39	0.30
Net Exports	8.36	32.40	20.46
National Disposable Income	9.23	7.95	9.06
Compensation of Employees	-7.90	-9.22	-8.80
Operating Surplus	6.51	6.02	7.17

Overall, the economic environment remained challenging in the second half of 2015, as lower oil prices continued to restrict government spending and limit the amount of foreign exchange available. The value of imports surpassed the value of exports in the third and fourth quarters, for the first time since 2011. In both the third and fourth quarter of 2015, growth in market price GDP was slightly slower than growth in basic price GDP, as a result of slower growth in net taxes on products in the third quarter (of 1.68% year on year in real terms) and a decline of 21.38% in the fourth quarter.

*Data may be subject to revisions

Summary—analysis of expenditure Components

Although growth in total real GDP grew by 2.79 percent in real terms between 2015 and 2014 and 5.73% in nominal terms, this hides differing trends in the growth rates of its components.

Figure 1: Percentage point contributions to year on year nominal growth rates of main expenditure components, and total GDP growth (basic prices)

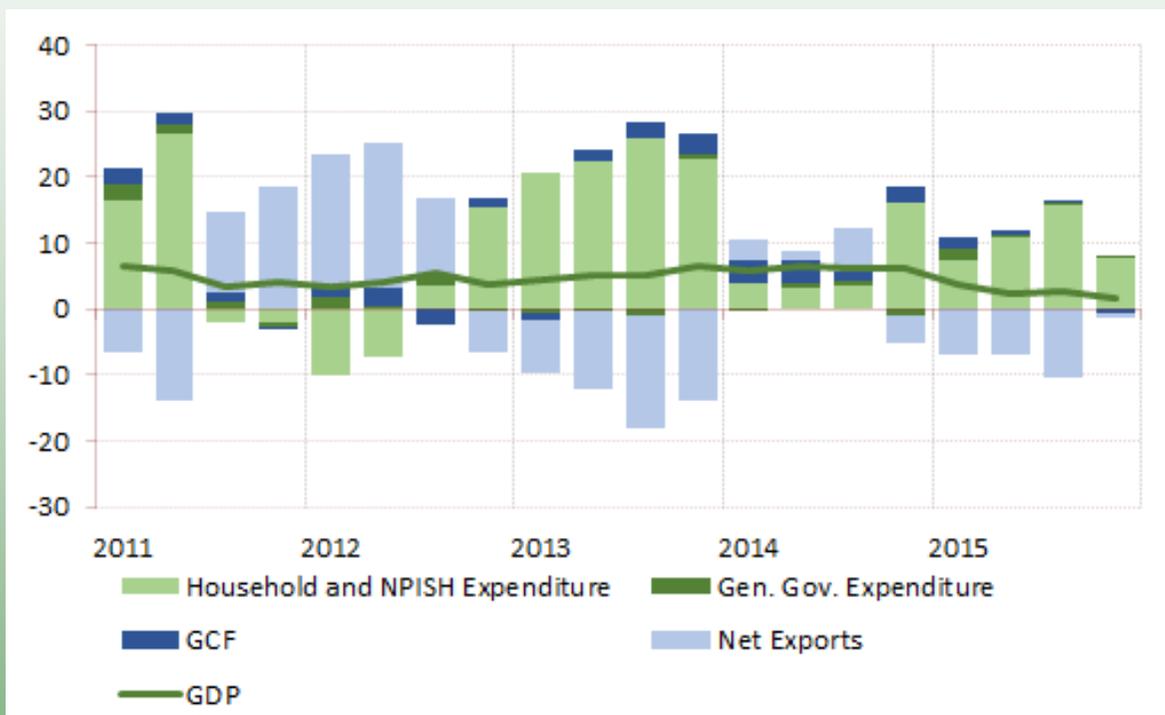

Figure 2 shows the contributions that each expenditure component made to year on year current price GDP growth, calculated as the growth of each component weighted by their importance to GDP, so that the sum of the bars in each quarter is equal to the growth rate in GDP. Growth in current price GDP was driven largely by household consumption, which recorded strong growth rates throughout 2015, but in particular in the third quarter. However this is largely a result of an increase in prices; growth in constant price household consumption was more subdued.

This growth was counteracted by a decline in the value of exports throughout 2015. This was largely due to the decline in the oil price, which on average fell by nearly a half between 2014 and 2015. In 2015 Q3 there was al-

so a sharp decline in trade in services, but this was reversed in the Q4. For 2015 as a whole the net balance of trade in nominal terms was a deficit of N 127.10 billion, compared to a surplus of N 5,394.75 billion in 2014.

By income measure, the decline in GDP growth between 2014 and 2015 was driven largely by Compensation of Employees, which recorded its first negative annual growth rate in real terms in 2015. While growth was positive in nominal terms, it nevertheless fell from 10.48% to 0.30% between 2014 and 2015.

------------------------------------	------

1. GDP BY EXPENDITURE

The Gross Domestic Product (GDP) can be derived as the value of all goods and services available for final uses and export. GDP at market prices includes net taxes on products; this is subtracted to obtain basic price GDP.

The expenditure approach measures the final uses of the produced output as the sum of Final consumption, Gross Capital Formation and Exports less Imports, which are considered in turn in this chapter. Consumption of fixed capital—a measure of depreciation of assets—comprises the difference between Gross Domestic Product (GDP) and Net Domestic Product (NDP) and is also considered in this chapter.

Basic price GDP grew by 2.84% in real terms in the third quarter of 2015, and 2.11% in the fourth, considerably lower than the growth rates of 6.23% and 5.94% that were recorded in the same quarters of 2014. Market price GDP grew at a slower rate, by 2.83% in the third quarter and 1.77% in the fourth, as a result of slower growth in Net taxes in

Household Final Consumption Expenditure:	This consists of expenditure, including imputed expenditure, incurred by resident households on individual consumption goods and services. This is calculated as a residual.
General Government Final Consumption Expenditure:	This consists of expenditure, including imputed expenditure, incurred by government at all levels on both individual and collective consumption goods and services. Individual consumption items are those that are provided to individual households, such as education and health services. Collective consumption items relate to goods and services utilised by society as a whole, such as security and infrastructure.
Not for Profit Institutions Serving Households Final Consumption Expenditure	This consists of expenditure, including imputed expenditure, incurred by Not-for-Profit-Institutions-Serving-Households, which consist of organisations such as charities and non-government organisations.
Gross Fixed Capital Formation	This is measured as the total value of producer's acquisitions, less disposals, of fixed assets during the accounting period, plus certain additions to the value of non-produced assets (such as improvements to natural assets) realised by the productive activity of institutional units.
Change in Inventories	is the consist of changes in; stocks of outputs that are still held by units that produced them prior to their being further processed , sold, delivered to other units or used in other ways, measure by the value of the entries into inventories less the value of withdrawals and the value of any recurrent losses of goods held in inventories.
Exports of Goods and Services	Consists of sales of goods and services to residents abroad, from residents within Nigeria
Imports of Goods and Services	Consists of sales of goods and services from residents abroad, to residents within Nigeria
Consumption of Fixed Capital	This represents the reduction in value of the fixed assets used in production during the period, that results from physical deterioration, normal obsolescence or normal accidental damage.

1.2. GDP Expenditure - Final Consumption Components

Household Final Consumption

In 2015 household consumption expenditure was volatile, but fell overall in real terms between 2014 and 2015 by 0.33%. While this possibly reflects uncertainty surrounding the election to some extent, the large year on year decline in the fourth quarter suggest that other factors contributed. The general slowdown in the economy, and resultant increase in unemployment and fall in compensation of employees, may have contributed to households' decision to consume less. This component accounted for 61.40% of real GDP in 2015. In nominal terms, this component nevertheless increased by 14.75% in nominal terms, reflecting the increase in prices over this period.

Not-for-Profit-Institutions-Serving-Households (NPISH)

After recording relatively strong growth in the beginning of 2015, final consumption expenditure of NPISH fell into negative territory in real terms in the second half of 2015, fall, expenditure fell by 0.78% in the third quarter and 3.79% in the fourth. Despite this, growth for the year as a whole was still positive; this component grew by 1.40% in real terms between 2014 and 2015. In nominal terms growth also fell, to 8.46% and 8.78% in the third and fourth quarter, compared to double digit growth in the first half of 2015.

General Government

General government expenditure is predominantly on collective expenditure items; this subcomponent accounted for 68.88% of government expenditure in 2015, or slightly more than two thirds. However collective expenditure recorded steep declines in the

Growth in Consumption Components in 2015

	<i>Real</i>		<i>Nominal</i>	
	Q3	Q4	Q3	Q4
<i>Y on Y</i>				
Households	3.22	-1.24	22.50	10.06
NPISH	-0.78	-3.79	8.46	8.78
Government	-5.42	-6.11	3.39	6.16
<i>individual</i>	29.60	-6.66	17.73	16.77
<i>collective</i>	-16.44	-5.88	-0.85	3.15
<i>Q on Q</i>				
Households	18.31	3.68	15.58	5.31
NPISH	29.68	19.31	32.64	25.52
Government	-7.07	-0.54	-4.94	4.63
<i>individual</i>	11.63	-11.25	2.98	-2.34
<i>collective</i>	-14.09	4.68	-7.44	7.08

third and fourth quarters of 2015, of 16.44% and 5.88% in real terms. In nominal terms there was still a decline in the third quarter, but this turned positive again in the final quarter. Individual consumption followed a different pattern; growth was strong in real terms in the third quarter at 29.60%

1.3. GDP Expenditure - Gross Capital Accumulation

Gross Fixed Capital Formation

Year on year growth in gross fixed capital investment has been declining since the beginning of 2014. In the second half of 2015 growth in real terms turned negative for the first time since the first quarter of 2013; GFCF declined on this basis by 1.11% in the third quarter and by 4.37% in the fourth. Growth in GFCF is driven predominantly by Non-residential Buildings, which accounted for 75.87% of real GFCF in 2015. However in the second half of 2015, investments in Transport Equipment and Machinery and Equipment weighed heavily on growth in GFCF, recording year on year declines of 35.98% and 24.09% respectively in real terms in Q3, and 52.36% and 38.76% in Q4.

Changes in inventories

Changes in inventories, often regarded as a sign of economic competence (as firms stock up on products if they anticipate higher future demand) recorded year on year declines in each quarter of 2015, in both real and nominal terms. In nominal terms, these were the first declines recorded since the rebased period from 2010. However, the year on year declines in the second half of 2015 were less severe than in the first. In the third and fourth quarter, the declines were 4.53% and 4.64% respectively in real terms, compared with 8.15% and 5.51% in the first and second quarter.

Consumption of Fixed Capital

Consumption of fixed capital (defined in chapter 3) is a measure of depreciation of assets, and is not part of GDP but represents the difference between gross domestic product (GDP) and net do-

Growth in Capital Accumulation in 2015

	<i>Real</i>		<i>Nominal</i>	
	Q3	Q4	Q3	Q4
<i>Y on Y</i>				
GFCF	-1.11	-4.37	2.23	-3.24
Changes in inv.	-4.53	-4.64	-1.32	-1.17
Cons. of fixed capital	2.30	3.04	5.73	6.79
<i>Q on Q</i>				
GFCF	-15.10	10.90	-13.96	9.67
Changes in inv.	-10.02	9.80	-9.30	10.85
Cons. of fixed capital	-8.10	9.38	-7.37	10.43

mestic product (NDP). As consumption of fixed capital recorded a lower growth rate than GDP in the third quarter, NDP grew at 2.86%, slightly outpacing GDP, however this was reversed in the fourth quarter, and as a result NDP grew only by 1.70%.

The positive growth of consumption of fixed capital contrasts with the declines in GFCF recorded in the third and fourth quarters of 2015. As a result, between these quarters and the corresponding periods of 2014, consumption of fixed capital increased as a proportion of GFCF, from 33.47% in 2014 Q4 to 36.07% in 2015 Q4. This means that more investment was needed in order to keep the capital stock constant in the later period.

1.4. GDP Expenditure - Trade

Exports of Goods and Services

The value of exports is greatly affected by the price of oil, given that a large percentage of the total value of exports consists of crude oil. As such there was a large decline in the value of exports between 2014 and 2015. However, the depreciation of the Naira in 2015 tampered the decline to some extent, as Nigeria faces international dollar prices for the majority of her export commodities. The volume of exports grew by only 0.14% in 2015, compared with 24.09% in 2014; this may partly be a result of the response of oil producers to the different price incentives. The year on year growth rate in the fourth quarter was significantly higher than the third, as by 2014 Q4 the oil price had already fallen significantly.

Imports of Goods and Services

The value of imports remained stable in 2015 relative to the value of exports, but nevertheless recorded a decline of 8.49% between 2014 and 2015. To some extent imports may also have been affected by the decline in the oil price—11.93% of the value of imports of goods and services comprised premium motor spirit, an oil-based product in 2015—but the restrictions placed on foreign exchange during the year may also have contributed.

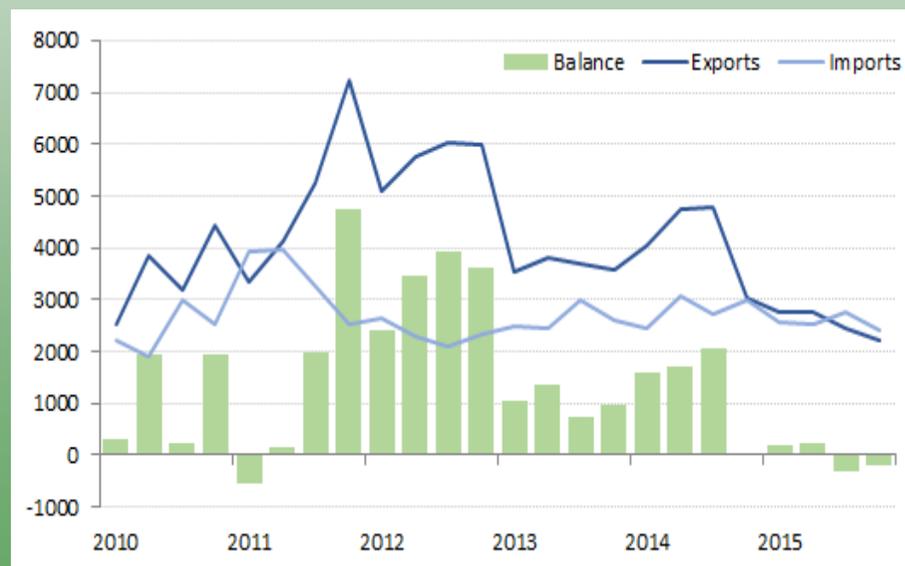

Net Balance of Trade

In the second half of 2015, the value of the balance of trade became negative for the first time since the beginning of 2011; in the third quarter the deficit was N 327.37 billion and in the fourth the deficit was N 209.82 billion. This is in stark contrast to the same quarters of 2014, when the balance was N 2,069.29 billion and N31.93 respectively in the third and fourth quarters.

Growth in Trade in Goods and Services in 2015

Imports	10.26	-12.11	9.24	-12.34

Figure 2: Value of exports, imports and trade balance (goods and services)

2. NATIONAL DISPOSABLE INCOME

National Disposable Income (NDI) is equal to national income, plus net other current transfers from the rest of the world. It measures all of the income which is available for use by residents and firms in Nigeria. It differs slightly from GDP which can be thought of as the sum of all income *produced* in the economy, as some income produced in Nigeria is transferred to the rest of the world, and vice versa.

National Income is calculated as the sum of domestic factor income (compensation of employees and operating surplus), external income (net compensation of employees and property income from the rest of world) and net taxes on production.

Compensation of Employees	This consists of total remuneration of employees in the formal sector, include both wages and salaries, and benefits in kind (such as pensions)
Operating Surplus	This is equal to the profit that remains for firms after costs have been covered. It includes the profit of those who are self-employed, which is often included in the national accounts under the entry "Mixed Income". It is calculated as a residual.
Compensation of Employees from rest of world (net)	This is the same as domestic compensation of employees, other than that the remuneration is earned from institutional units not resident within Nigeria.
Property and entrepreneurial income from res of world (net)	This is equal to operating surplus earned from non-resident units, plus property income earned from assets owned, minus interest payable in liabilities and rents payable on land or other tangible assets held abroad.
Other Current Transfers from rest of world (net)	These consist of transfers from non-resident units that are included as either compensation of employees or property and entrepreneurial income. They can include items such as remittances or net premiums and claims for non-life insurance.
Net taxes on Products	This represents total taxes payable on products, minus any subsidies received for the product.

National Disposable Income

2.1. National Income

Compensation of Employees

In 2015 compensation of employees recorded an annual fall of 8.81% in real terms, which was the first annual fall on record, and over 10 percentage points lower than the second lowest annual growth rate of 2.23% in 2014. Growth in the second half of 2015 was slightly stronger than in the first, however it was still considerably lower than in previous years. Throughout 2015 the unemployment rate also increased, from 6.4% in the final quarter of 2014 to 10.4% in the final quarter of 2015. Formal job creation also declined in the first three quarters of 2015.

Operating Surplus

2015 annual growth in real terms was 7.17%, slightly lower than the 7.49% recorded in 2014. The year on year growth rates declined throughout 2015 in real terms, although in the first quarter the growth rate was the highest recorded at 9.77%. This fell to 6.51% in the third quarter and 6.02% in the fourth. In nominal terms year on year growth was 8.04% and 8.90% in the third and fourth quarters, a slight recovery compared to the first half of 2015 but nevertheless subdued relative to previous years.

Net Taxes on Products

Net taxes on products fell in both real and nominal terms between 2014 and 2015, by 8.23% and 5.54% respectively. As well as being a component of National Income, they constitute the difference between market and basic price GDP. Given the large fall in the fourth quarter of 2015, market price GDP grew by 1.77% year on year this quarter, compared with 2.11% for basic price GDP.

Growth in Domestic Factor Incomes in 2015

	<i>Real</i>		<i>Nominal</i>	
	Q3	Q4	Q3	Q4
<i>Y on Y</i>				
Comp. of Employees	-7.90	-9.22	0.68	2.64
Operating Surplus	6.51	6.02	8.04	8.90
Net taxes on Products	1.68	-21.38	4.82	-17.52
<i>Q on Q</i>				
Comp. of Employees	-6.83	5.80	-4.69	11.31
Operating Surplus	16.64	1.72	12.00	4.67
Net taxes on Products	45.41	-8.88	41.65	-5.75

Figure 3: Y on Y Growth rates in domestic factor real incomes (%)

National Disposable Income

2.2. External Income

Compensation of Employees

Compensation of Employees received from the rest of the world (net) increased sharply in 2015, rising by 48.24% between 2014 and 2015 in nominal terms and 134.72% in real terms. To some extent this may be a result of the depreciation of the Naira; as the Naira weakens, each unit of foreign currency can be exchanged for a larger amount of Naira. However, there has also been a consistent decline in compensation of employees paid to residents abroad throughout 2015, and this fell to N173 million in the third quarter (nominal), and zero in the final quarter of 2015. Alongside year on year increases in compensation earned from the rest of world, this led to year on year increases of 85.89% and 51.69% in the third and fourth quarter of 2015 in nominal terms, and 243.45% and 99.19% respectively in real terms.

Property and Entrepreneurial Income

In contrast to compensation of employees, property and entrepreneurial income from the rest of the world (net) has been negative since 2010, which indicates that property income paid to residents abroad is larger than property income received from assets and ventures abroad. However in 2015 the difference became smaller as a result of less income flowing abroad, property income paid abroad fell from N 865,840 million in 2014 Q4 to N 646,838 million in 2015 Q4 (nominal). This may be related to the sharp decline in capital importation recorded in 2015; inflows declined from \$20.75 billion to \$9.64 billion, which implies that foreign investors have not increased their holdings of income-earning assets in Nigeria to the same degree. As with compensation of employees, the largest change was in real terms; the third and fourth quarters, the deficit in property income from the rest of the world declined by 50.07% and 48.04% year on year in real terms, but by only 29.28% and 25.89% in nominal.

Compensation of Employees from RoW in 2015

Q on Q				
From rest of world	21.00	6.74	-2.95	5.32
To rest of world	-47.03	7.35	-47.52	7.07

3. CAPITAL FINANCE

Capital finance is the sum savings, and consumption of fixed capital. It is equal to gross accumulation of capital; as all savings in the economy are invested, either as gross fixed capital formation, inventories, or as loans to the rest of the world. As with the difference between GDP and NDP (net domestic product) the word "gross" refers to the fact that consumption of fixed capital is included. Subtracting this value gives net capital accumulation.

Savings	Savings is measured as the difference between National Disposable Income and total consumption expenditure (of households, government and Not-for-Profit-Institutions-Serving-Households)
Finance of Gross Accumulation	This is equal to Savings + Consumption of Fixed Capital
Consumption of Fixed Capital	See chapter 1
Gross Fixed Capital Formation	See chapter 1
Change in Inventories	See chapter 1
Net lending to the rest of the world	This represents savings, minus the value of acquisitions less disposables of financial assets, less the consumption of fixed capital. Essentially it is the amount that resident units in Nigeria are able to finance non-resident units.

Capital Finance

3.1 Capital Finance

Savings

In 2015, a large gap emerged between savings in current prices and savings in constant prices, given a large fall in the implied deflator. Whereas savings fell by 47.49% in the third quarter, and by 3.91% in the fourth in nominal terms, in real terms savings increased by 32.27% and 31.83% in the third and fourth quarter respectively. For 2015 as a whole, savings increased by 31.58% in real terms and decreased by 31.07% in nominal terms.

Net Lending to Rest of World

Net Lending to Rest of World moves closely with export earnings. As such, net lending recorded strong year on year growth in real terms, of 53.48% in the third quarter, and of 61.68% in the fourth quarter of 2015. This is equivalent to an increase of N 1,520.76 billion and N 1,642.41 billion respectively. In nominal terms however, net lending decreased year on year, by 104.11% in the third quarter and 218.59% in the fourth quarter of 2015. For 2015 as a whole, net lending to the rest of the world increased by 54.92% in real terms and decreased by 97.51% in nominal terms.
