

**CONSUMER PRICE INDEX**  
**(BASE PERIOD NOVEMBER 2009 = 100)**

**NATIONAL BUREAU OF STATISTICS**

No. 512  
October 2012

## BRIEF METHODOLOGY:

The CPI measures the average change over time in prices of goods and services consumed by people for day-to-day living. The construction of the CPI combines economic theory, sampling and other statistical techniques using data from other surveys to produce a weighted measure of average price changes in the Nigerian economy. The weighting occurs to capture the importance of the selected commodities in the entire index. The production of the CPI requires skills of economists, statisticians, computer scientists, data collectors and others.

Key in the construction of the price index is the selection of the market basket of goods and services. Every month, 10,534 informants spread across the country provide price data for the computation of the CPI. The market items currently comprise of 740 goods and services regularly priced.

The first stage in the calculation of the CPI is the collection of prices on each item (740 goods and services) from outlets in each sector (rural or urban) for each state. Prices are then averaged for each item according to sector across the state. The next step is to use the average price to calculate the basic index for each commodity: The current year price of each commodity is compared with a base year's price to obtain a relative price.

Next we use the Laspeyres formula to compute an aggregated index for each class (which has a multitude of commodities which have similar consumption purposes): Here the sum of the product of weights (obtained from the expenditure

survey) and relative prices for each item is divided by the sum of the weight of the items in that class, and the result multiplied by 100 gives the required index number. This index number is still classified according to the urban or rural classification sector for each of the 36 states and the FCT. This yields 85 classes then 48 groups which are then reclassified into 12 Divisions to derive:

1. The country composite index
2. The Urban Composite index
3. The Rural Composite index
4. The Combined Urban and Rural State Composite index

The survey methodology generates 3774 all items indices for all states and the FCT.

This edition of the Statistical News contains the revised Consumer Price Index (CPI) based on Nigeria Living Standard Survey (NLSS) 2003/2004. The consumption expenditure data were re-valued to November 2009, which is the base period for the revised CPI.

The May 2003 and September 1985 based indices are being continued using factors derived from the new CPI. All of these indices will yield the same price change for any commodity group contained in all the series. A new sub index – Imported Food Index- is available in the revised CPI.

Note: The urban and rural indices were weighted with the ratio of their populations to the national i.e. 0.455 and 0.545 respectively to compute the composite indices at the 12 COICOP functions and all items levels. This may cause variance

between a recalculated all items index using the weights published on table 2 and the published all items index because the published weights were computed only from

consumption expenditure survey result. The following breakdown highlights a non-exhaustive list of the components of the current CPI:

### **FOOD AND NON ALCOHOLIC BEVERAGES**

- Food
- Bread and cereals
- Meat
- Fish
- Milk, cheese and eggs
- Oils and fats
- Fruit
- Vegetables
- Potatoes, Yam & other tubers
- Food products n.e.c
- Coffee, tea and cocoa
- Soft drinks

### **ALCOHOLIC BEVERAGES, TOBACCO AND KOLA**

- Spirits
- Wine
- Tobacco
- Narcotics

### **CLOTHING AND FOOTWEAR**

- Clothing materials, other articles of clothing
- Garments
- Cleaning, repair and hire of clothing
- Shoes and other footwear
- Repair and hire of footwear

### **HOUSING, WATER, ELECTRICITY, GAS**

- Actual and imputed rentals for housing
- Water supply
- Miscellaneous services relating to the dwelling
- Electricity
- Gas
- Liquid fuel
- Solid fuels

### **FURNISHINGS, HOUSEHOLD EQUIPMENT**

- Furniture and furnishings
- Carpets and other floor coverings
- Repair of Furniture
- Household textiles
- Major household appliances whether electric or not
- Repair of household appliances

Glassware, tableware and household utensils

Non-durable household goods

Domestic services and household services

**HEALTH**

Pharmaceutical products

Medical services

Dental services

Paramedical services

Hospital services

**TRANSPORT**

Motor cars

Motor cycles

Bicycles

Vehicle spare parts

Fuels and lubricants for personal transportation

Maintenance and repair of personal transport

Passenger transport by road

Passenger transport by air

Passenger transport by sea and inland waterways

**COMMUNICATION**

Postal services

Telephone and telefax equipment

Telephone and telefax services

**RECREATION AND CULTURE**

Audio-visual, photographic and information processing equipments

Photographic development

Musical instrument

Recreational and sporting services

Games of chance

**EDUCATION**

Books & stationery

**RESTAURANTS AND HOTELS**

Catering services

Accommodation services

**MISCELLANEOUS GOODS AND SERVICES**

Hairdressing salons and personal grooming establishments

Appliances, articles and products for personal care

Jewellery, clocks and watches

Insurance

Other services.

## ALL ITEMS INDEX

In October 2012, the composite Consumer Price Index which measures inflation rose to 11.7 percent year-on-year (compared to 11.3 percent in September). On a year-on-year basis, the relative moderation in the headline index in October was offset by the rising cost of food items during the period. While the "Core" index continued its declining trend over the last few months, rising to 12.4 percent in October from 13.1 percent in September, the food index increased to 11.1 percent from 10.2 percent over the same period. Since its year-on-year peak of 15.2 percent in June of this year, the Core index continues to exhibit a declining trend partially as a result of uncompromising monetary policy on the part of the Central Bank of Nigeria.

It should be noted that the Headline Index is made up of the *Core Index* and *Farm Produce items*. As Processed Foods are included in

both the Core and Food sub-indices, this implies that these sub-indices are not mutually-exclusive. On a monthly basis, the composite CPI was higher by 0.88 percent when compared with September 2012.

In October, the Urban inflation rate was recorded at 15.3 percent year-on-year compared to 14.2 percent in September, while the Rural index recorded a 9.1 percent year-on-year increase, relatively unchanged from September. Both the Urban and Rural All Items index increased by approximately 0.9 percent month-on-month each, when compared with the previous month. The percentage change in the average composite CPI for the twelve-month period ending in October 2012 over the average of the CPI for the previous twelve-month period remained unchanged at 11.9 percent, while the corresponding 12-month year-on-year average percentage change for Urban and Rural indices was 13.5 percent and 10.8 percent respectively.

## FOOD INDEX

In October, the composite Food Index increased year-on-year to 11.1 percent, 0.9 percentage points higher than 10.2 percent recorded in September. On a month-on-month basis, the Food index increased by 1.0 percent in September.

The rise in the Food Index was mainly due to higher food prices in various classes lead by meat, fish, potatoes, yams and other tubers, fruits, bread and cereals as well as other foods.

While the impact of security concerns on agricultural production has eased significantly, the higher food prices continue to reflect the impact of recent floods on the production of farm produce, resulting difficulty of moving food products to markets across the country, coupled with higher demand for food items due to the just concluded Muslim festival. The average annual rate of rise of the index for the twelve-month period ending in October 2012 was 11.2 percent when compared to the same period in 2011.

## ALL ITEMS LESS FARM PRODUCE

In October, the "All items less Farm Produce" index which excludes the

prices of volatile agricultural products rose by 12.4 percent year-on-year. This was 0.7

percentage points lower than the 13.1 percent recorded in September. The relative moderation in the core index (on a year-on-year basis) continues a trend exhibited for four consecutive months. Increases in the Core index were as a result of increases in the educational expenses due to the resumption of the academic year, higher transportation costs in road and air

transport due to the recent concluded Muslim festival, and health expenditures. On month-on-month basis, the core index increased by 0.4 percent in October, down marginally from 0.5 percent in September. The average 12 month annual rate of rise of the index remained at 13.5 percent (year-on-year) for the twelve-month period ending October 2012.
